NEWS IN BRIEF

ICL to expand in Europe?

SEEKING to expand and consolidate its position in Europe, particularly the EEC countries, ICL is making a detailed study of the major markets with a view to possible acquisition of or collaboration with European-owned companies.

"There are no deals in progress at the moment," a spokesman told Computer Weekly, "but we are always interested in acquisitions which might further our business, and we want to strengthen our base in Europe."

Banking on 2803s

TWO more banks have ordered ICL 2803s. The New York office of the Banco Totta e Acores of Portugal is to follow the lead of the London office and install a 280,000 2803 when it opens later this year, and the French Credit Industriel et Commercial is to have a 2803 in its London office. It will use an international banking package developed by Arthur Andersen & Co.

B6800 for OUP

THE largest book publisher in the UK outside government, the Oxford University Press, is to acquire a Burroughs B6800 for online working, to replace its ICL 1902T. There will be over 60 terminals in London, Oxford and Glasgow, and the machine will be used for stock and financial control, and also for preparation of the actual text of books.

Paymaster switch

TWO ICL 2800 machines, ordered in 1975 to replace two systems 4/50s (CW, October 30, 1975), are now installed at the Paymaster General's Office at Crawley, Sussex.

'Doctors opposition based on ignorance'—Samet

DOCTORS' opposition to computerised medical records systems was based on emotion and ignorance, said BCS president Professor Paul Samet in a letter to the British Medical Journal.

He was commenting on the discussion about computers and confidentiality at the BMA's recent meeting at Cardiff (CW, July 20) in which 18 motions proposing non-cooperation with computers in various ways, were put forward.

Doctors said they were worried that if patients' records were stored on computers, confidentiality would be lost. In particular, the doctors objected to the DHSS's proposed Child Health system (CW, May 4).

According to Samet, doctors did not understand a word about security of records. They should realise there were many other types of sensitive records that needed careful handling, and that solutions to the problem had already been developed.

The suggestion that handwritten documents stored in an open folder in a filing cabinet are secure is absurd, Samet said. He added that the only security factor they had was the doctors' illegible handwriting. Computers could provide much better security, he pointed out, by providing extra features such as limited access to certain fields of records to certain people who are excluded from seeing other fields.

Efforts to prevent the combination of records from several different sources were hardly valid for medical records. The potential of computers to help anticipate and prevent epidemics, tragedies such as that at Thalidomide, would be lost, he added.

A questionnaire published in the latest issue of the BMA News Review was described by Samet as "dull". It was headed, "BMA News Review is seeking the help of all its readers in gathering evidence to support the growing threat to confidentiality of computers."

It asked such questions as "Should doctors be the persons to safeguard the confidentiality of their patients' records? Are you concerned that, without specific safeguards, computerised records may endanger this confidentiality? In view of the increasing use of computers by Government departments, should the Secretary of State continue to have legal ownership of patients' records?"

Samet commented that the questions told what answers to put. He quoted a headline in the British Medical Journal, "Doctors warn computerise of ethical dangers". There should be another story, he said, headed "Computerists warn BMS of medical dangers".

US bank blacked in PO dispute

THE Post Office Engineering Union's action in support of a 35-hour week has disrupted data communications links with the London office of Continental Illinois, a Chicago-based banking group.

The links connect terminals in the London office to IBM and DEC computers in Chicago via multiplexer and modem equipment in Brussels.

The bank's new offices had only five lines to single telephones. After an initial delay, the private exchange was connected by Post Office management, and the union blacked the firm. A spokesman for the union said that it would stay blacked until the dispute was resolved.

Lord McCarthy has now concluded his series of meetings with the Post Office and the Post Office Engineering Union, and will present his report to Industry Minister Eric Varley at the end of this week.

So far about 150 employees have been sent home for refusing to install equipment.

Atkinson for DoI

DIRECTOR of the Central Computer Agency, Roy Atkinson, is to be transferred to the Department of Industry in September. He will be replaced at the CCA by Gerald Watson, who at present runs the Financial Policy Planning at the Financial Division. Details of Atkinson's new job at the DoI have not yet been released.

Grundy interest in NPL teaching aid

THE electronics and engineering group, Grundy, is producing six prototypes of Muppet, a micro-based system developed at the National Physical Laboratory, Teddington. It is claimed to be the first hand-held teaching computer.

Grundy, which has a minority interest in Data Recording Instruments, the computer peripheral manufacturers, has also said that it is interested in the commercial production of the device. An interactive system that can be used for such applications as language tutoring, it is one of a number of important developments of the NPL team, headed by Dr Christopher Evans, psychologist and computer scientist. These include the Mickla Hospital patient interviewing system (CW, February 17) and Mevia, the micro-based aid for the severely handicapped (CW, September 15, 1977).

Commenting on the future potential for "personal tutors" like Muppet, Dr Evans said that the next decade could see such demand for them that unit costs could approach £10.

"There is no way the world can afford to give every human being a personal teaching service," he said. "At present, training teachers is expensive and once qualified, they have to time-share their talents among hundreds of students. I believe that in the early 1980s, there will be an immense number of Muppet-like systems in use supporting teachers."

Muppet consists of a pocket-calculator type unit with a one-line alphanumeric display. This has 10 digits and can handle all 26 letters of the alphabet and numbers from 0 to 9. In addition to these, there are four extra functions on the keyboard: Space Go, which acts as a 'new line' key; Back and Erase; and a 'key' which acts as a 'new line' key.

Based on an Intel 8085 microprocessor, Muppet has 256 bytes of RAM and 4K of EPROM; the EPROM being divided equally between program and data storage.

Dr Evans, who originated the idea for the teaching computer, said: "It took less than a year and under £1,000 to develop Muppet. This shows the tremendous speed at which you can work with this technology."

The NPL team was multidisciplinary, drawing its experience from computers, psychology, and ergonomics. It was this, feels Dr Evans, that enabled them to get around the problems of presenting alphanumeric information on a one-line display and designing a keyboard that is readily usable by anyone.

The keyboard has been arranged so that the vowels fall across the top five keys — a suggestion made by colleagues at Loughborough University, and a design that has brought some encouraging results.

"It appears to be intuitively simple to operate," said Dr Evans. "People can begin typing in responses in seconds."

Basic research into the problems of displaying interactive alphanumeric text on a one or two-line basis was carried out by Brunel University student Hazel Bennett at NPL last year, when a Termiflex hand terminal with a two-line LED display was linked to the lab's Digital Equipment PDP-11 and a simulation program designed.

With just 20 keys and three shifts, operation of the terminal was less than fluid, but it proved that useful information could be provided on a restricted display.

On the prototype model, a French vocabulary program has been loaded on to the EPROM together with an automatic, albeit limited, English/French dictionary. However, as Chris Goss, the consultant and software designer who built the prototype says, the potential for increasing Muppet's capabilities is enormous.

"There would be no problems in expanding Muppet's size to something like 8K or 10K right away," he said, "and with bubble memory we could extend this still further."

Muppet, claimed to be the first hand-held teaching computer.

Briefing Fairchild and GEC join up

A JOINT company to make microelectronic components is to be set up by GEC and Fairchild. This has been agreed in principle and full details are expected to be announced next week.

The new company will have a UK manufacturing base, while product development will be carried out in the US. Fairchild makes a wide range of semiconductor devices, but the new company is likely to concentrate on memories and microprocessors. The main Fairchild devices in the micro market are the 3870 8-bit and the 8440 16-bit units. The latter is still the subject of a lawsuit by Data General (CW, September 15, 1977).

Impact on Europe

THE director general of the Computing Services Association, Alan Benjamin, is to talk to an all-party group of the European Parliament later this year on the needs of the industry and the impact of information technology in general.

Colossus launch

THE new 32-bit minicomputer due next month from Perkin-Elmer's Interdata division, exclusively revealed in Computer Weekly (May 25), is expected to be built around a 40 Megabyte bus and may have a virtual storage operating system. Code-named Colossus, the new machine will use discs from Perkin-Elmer's Wang division and displays and printers from the Terminals division.

Research shift

RESEARCH spending by the Department of Industry is shifting slowly from aircraft and space to computer, electronics and engineering, according to the Department's annual R&D Report. Though the largest slice of the £125 million in 1977-78 (£137 million estimated for 1978-79) still goes to space technology, computers and electronics accounted for £8.9 million in 1977-78, and will take £12.4 million next year.

Joint venture?

THE National Physical Laboratory is considering collaboration with Logica, GEC, Perkin-Elmer or Plessey for a new venture in its pioneering packet-switched network. Full report, page 11.

Wordplex

IN the news synopsis on the cover of Computer Weekly for August 3, there was a reference to Wordplex, the word processing equipment manufacturer. We understand with the statement: "The Development Corporation has the honour of the Wordplex organisation."

Recent, but the statement is simply without foundation and is a distortion of the facts. Wordplex and ACS are merging in order to expand their operations and to provide a more complete and accurate report of the situation was published on the cover of the same issue.

IBM groups may oust plug-compatible users

THE London-based bureau, Teamco, could be one of the first users of an IBM plug-compatible CPU in Europe to get the cold shoulder from IBM user groups. Teamco has replaced its IBM 370/155 with an Intel AS/5 and has written to Guide, the group concerned with large users, and the IBM Computer Users Association, asking if it can still be a member of these groups.

UK correspondent of Guide, Barry Aldred, of Southern Gas, told Computer Weekly that membership of Guide would definitely not remain open to users that replace IBM processors with plug-compatible machines. "Allowing users that do not have an IBM processor to stay in Guide would affect our relationship with IBM." However, he added, "We would only allow membership to be retained in special cases such as where a particular user is a positive benefit to Guide."

He said Teamco might qualify as a special case because its parent company in Norway runs an IBM 370/155 and could sponsor its UK subsidiary.

Another Intel user, Unilever Computer Services Ltd, which has three Intel AS/5s, two installed and one coming, told Computer Weekly that it would continue to qualify for Guide because it still had an IBM 360/65 and whether or not it remained in Guide could affect its choice of a replacement.

The IBM Computer Users Association will probably discuss Teamco at its council meeting on September 12. One leading member of the association said that it could be a heated debate because any user of an IBM computer, including bureau customers, is eligible to join the CUA and that to exclude users of IBM compatible kit could be seen as unreasonable.

The position of plug-compatible users in the leading European IBM user group is also uncertain, although its US equivalent, Shure, voted last year to exclude non-IBM users and use Amdahl to understand to have been excluded.

Intel users in the UK, about 10 at the moment, are setting up their own user group. This, it is claimed, will be more independent of Intel than Guide and Shure of IBM.

The projected European Systems Language, ESL, is intended as a portable tool for implementing software at a level between that of applications programs and the operating system. Specific applications identified by the Commission include the construction of management information systems, database management systems, and information retrieval systems.

EEC initiates software study

By Peter Hewitt

MAJOR studies in the field of software portability, including proposals for a standard European systems implementation language, are to be initiated by the EEC by the end of October. The three studies, for which invitations to tender were issued early in July, also include an examination of the feasibility of a common software interface for minicomputers, and an investigation of the need for new software conversion tools.

The projected European Systems Language, ESL, is intended as a portable tool for implementing software at a level between that of applications programs and the operating system. Specific applications identified by the Commission include the construction of management information systems, database management systems, and information retrieval systems.

The ESL may be an existing language, a development of an existing language, or a new language, according to the tender documents.

Described as preparing ground for future standardisation, the study of the feasibility of a common software interface is targeted at defining a common set of functions for minicomputer operating systems.

By identifying basic common functions, such as scheduling, supervisory, and monitoring functions, as well as higher level functions, such as communications handling, it may be possible to establish a common function set and subsequently a common software interface.

Such a standard interface would be an ideal basis for a standard job control language.

MoD step towards standard

A FURTHER step in the standardisation of real time defence computing is understood to be under consideration by the Ministry of Defence. If implemented, it would require all future applications to use a software system called Mescot, originally developed at the Royal Signals and Radar Establishment.

Until now, contractors have been directed to consider the use of Mescot but have not been

South African police decide on ICL 2900 to administer pass laws

AFTER going out to open tender, the South African police force has decided to replace its existing ICL computer with a 2900. The new computer is said to be intended for use in part to administer South Africa's pass laws, which regulate the movement and employment of Africans within the Republic. The only ICL computer previously associated with the pass laws is a 1904E, installed in 1968 with the Department of Bantu Administration (CW, September 13, 1978).

All companies active in South Africa apart from IBM are reported to have bid for the contract.

However, earlier this year, the US government imposed restrictions on sales of US computers to the South African defence and police forces (CW, March 16), effectively barring any US manufacturer from completing the order if it had won the contract.

NCR COM expansion with Quantor takeover

ONLY two weeks after the announcement that Agfa-Gevaert was taking over the marketing of Quantor computer output microfilm recorders in Europe from NCR (CW, July 27), NCR has announced that it is acquiring Quantor NCR in the UK says that if the deal goes through it expects to continue selling Quantor systems in Europe.

NCR and Quantor have reached an agreement in principle under which NCR would acquire Quantor for \$7.5 million in cash. The acquisition is subject to approval by the shareholders of Quantor and by the boards of both companies.

Chairman of NCR, William Anderson, said that the takeover would provide the basis for expansion by NCR in the micro-

graphical and related fields. Quantor, based at Mountain View, California, turned over \$15,524,000 in the first nine months, ended April 30, of its current fiscal year.

A spokesman for Agfa-Gevaert at its Antwerp head office said that he had not been notified by Quantor of any change in the agreement signed between the two companies.

Design Brief

Micro Logic is Data Logic's microprocessor division. They apply microtechnology to real situations. They advise, design and assemble. Almost certainly, if anything can be done with micro they can do it.

One of Micro Logic's clients had a very special requirement. One hundred portable systems, each to contain a processor and store, a floppy disc drive, a visual display unit with keyboard, and a printer. Why so special? Because the application called for each unit to weigh less than 20 lbs and to fit into a container no bigger than a standard briefcase.

Microprocessors open up completely new areas for computing. But they demand a whole new way of thinking. Micro Logic knows how to think small. And differently.

DOWNTIME

by Chad

Plain man's guide

AT LAST I have discovered exactly what all this microelectronics nonsense is about. In a recent article in the Northern Echo, the following paragraphs succinctly set out the facts on both the technology, and the current activities of the National Enterprise Board in this area. The Northern Echo feels it is certain that the NEB will place its new microelectronics facility in its area.

I quote verbatim: "Computers powered by silicon chips are regarded as the next era to which technology is taking mankind. "The North-East plant will produce a computer known as 64 KILOBYTE random access memory micro-processor. "In simple terms, that means the computer, which will be so small that it can be worn on the wrist like a watch, can store and transmit 64,000 separate pieces of information. "So that's what the NEB is up to — IBM beware."

Summer hol

I reached my EOI and, tramping my package operator, started my exit routine to the sun.

Then entered at Heathrow a zero-rip loop.

TV sport

don

DON'T let on to your doctor that you work in the computer industry. The BMA is showing disquieting signs of paranoia about our lovable machines. It is taking a survey of doctors' views on computer and confidentiality, and at the bottom of the questionnaire it says in big letters: "ALL DETAILS WILL BE TREATED IN STRICTEST CONFIDENCE AND WILL NOT BE FED INTO A COMPUTER."

The revised American National Standard for Fortran, informally known as Fortran 77, was finally approved by ANSI in April

this year (CW, May 18). Last week DAVID MUXWORTHY, of the Edinburgh Regional Computing Centre, summarised

the main changes in the standard. Here he describes the lines of thought currently being followed by the ANSI For-

tran committee, X3J3, in preparing the next standard for the language, due in 1982.

Towards a much better Fortran

IT is arguable that Fortran should not be further developed and that more modern languages should be allowed to replace it. This view has been widely expressed, including within the American Standards Fortran Committee itself. It should not be assumed, by the way, that because the committee is based in the US and deals with a venerable language, that its members are unaware of languages like Algol 68, Modula, Pascal and Simula.

However, the committee has over 550 outstanding detailed requests from the public for further additions to Fortran and has taken the pragmatic view that Fortran will continue to play a role in the foreseeable future.

Further development of the standard should have benefits by increasing the power of the language, by minimising differences between implementations, and by improving portability and thus indirectly should minimise the costs of programming, or retraining programmers and of acquiring programs.

Two classes of module have been taken by X3J3 on Fortran 82, so that reference below to particular keywords and syntax is conjectural. One decision is that a meta-language will not be used to describe Fortran until meta-language has been standardised. The other is that the Fortran 82 standard will consist of a core language plus independent modules as a basis

for development the core will consist initially of Fortran 77. This decision is in response to requests to include facilities in Fortran which would be of use to many programmers but which it would be unreasonable to insist appear in all standard conforming systems.

The two immediate examples are database handling and real-time facilities. In both these cases X3J3 is having discussions with other interested bodies, namely the Code and Fortran Database Manipulation Language Committee and the International Purdue Workshop Fortran Committee.

Two classes of module have been taken by X3J3 on Fortran 82, so that reference below to particular keywords and syntax is conjectural. One decision is that a meta-language will not be used to describe Fortran until meta-language has been standardised. The other is that the Fortran 82 standard will consist of a core language plus independent modules as a basis

The most obvious control structure lacking in Fortran 77 is a looping facility. Instead of going for a simple DO WHILE, the committee is first specifying

a set of requirements for a loop, including the ability to have multiple exits with arbitrary placing, multiple-level exits and unique end of loop processing for each exit. The second is to cope with nested loops and the third could involve an optional CASE sequence at the end of a loop.

Other structures most likely to be introduced in Fortran 82 are a CASE construct and an internal procedure. The latter at its simplest would be a portable block of statements, which would be apt since the extended range of a DO is not permitted in Fortran 77. However, this is more likely to be a

full internal subroutines of function. The introduction of these facilities would allow computer and assigned GO TOs to be removed from the standard.

There have been arguments in favour of dropping double precision variables and replacing them with the ability to specify the precision, perhaps in decimal digits, of each variable separately. This would have far-reaching consequences. It would mean the end of COMMON and EQUIVALENCE for all practical purposes and could affect the portable compilation of subprograms. It is arguable that the resulting language would simply not be Fortran.

Even then the requirements of numerical analysts would not be met and a more likely adoption would be that of a set of environmental inquiry functions from which a program could

request details of the host system's arithmetic properties.

This less radical approach would allow for double length integer variables; packed decimal variables have also been discussed. Other possible types of variable include pointers, labels and bits as well as programmer-defined types.

Some of these may be too far advanced when the problems of relating character to numeric storage units have still to be solved. In a machine-independent way.

Other things under consideration include extensions to character handling, for example, to allow for full strings, an option to force all variables to be typed explicitly and a statement to allow partitioning of arrays, including "dummy" argument arrays into other arrays — a form of synonym facility, eg

SUBROUTINE S (A,N)
REAL A(N) + 2 * N + 2
MAP A/O (N,N), N(N), S(N), N(N)

This would be of use particularly in writing subroutines libraries but might better be included in a more general form of data structure. More fundamental extensions being debated include dynamic storage of local scalar variables and arrays, and recursion.

Array processing was for a time included in the revision of the 1966 standard but was finally voted out. Now it has been added again and there is some doubt as to whether it should be added, for example, to consider

row of a two-dimensional array as a single entity when by definition its elements are not contiguous. This could give efficiency problems if the row were passed as an argument to a subprogram. There is also doubt as to whether full matrix arithmetic should be in Fortran 82.

There appears to be little fundamental change so far put forward for input/output. There are proposals to generalise internal and direct-access files and free-format input/output, to consider indexed sequential files, to extend format codes and to address the problems of multiple tapes. It would appear that there is no proposal to adopt NAMELIST, asynchronous I/O or stream access.

For Fortran 77, the view was taken that any relaxation of the rules for the written form of the language should be the function of a preprocessor rather than a Fortran processor. Now it seems possible that a free-form, state-

ment will be adopted. So long as labels remain numeric only little change is needed other than to denote comments by other than a letter or digit in column 1 and to devise a continuation convention.

It would appear very unlikely that Fortran would require a semi-colon at the end of each statement but it is not immediately obvious how to make a new format compatible with the old one. Null statement lines and comments on the same line as a statement have been requested, as have lower case characters, new numeric labels and longer names. The problem with the latter two is that they could cause ambiguities in certain statements, eg in

DO III = 1, 10
It could be the label and the control variable or vice versa. One way round this would be the introduction of the significant blank, almost as radical a departure as the removal of the common block.

Finally completely new features are open for discussion. These include wheel debugging statements and standardised comments and other options. Whether or not a field has been mentioned in the whole of Fortran is open for discussion. Comments are expected and should be sent to the author.

held under the auspices of IAC and will discuss Fortran 82. Since, in effect, ANSI produces the Fortran standard on behalf of ISO, the object of the meeting will be to allow countries to advise ANSI of their needs at an early stage in the development. The ISO pre-development Languages Committee has set up a working group to study function 1.0 to collect British opinion as input to the meeting; comments should be sent to D. T. Muxworthy, Edinburgh Regional Computing Centre, Mayfield Road, Edinburgh EH8 8JZ.

A MEETING to be held in London at the end of November this year offers the British computing public an unusual opportunity to influence the continuing development of Fortran. A revised American Standard for Fortran 77, was finally the same document as being voted out for possible adoption as an ISO standard. Since language standards are by definition only for five years, it is not surprising that some doubt as to whether it should be added, for example, to consider

request details of the host system's arithmetic properties.

This less radical approach would allow for double length integer variables; packed decimal variables have also been discussed. Other possible types of variable include pointers, labels and bits as well as programmer-defined types.

Some of these may be too far advanced when the problems of relating character to numeric storage units have still to be solved. In a machine-independent way.

The soft soap hard sell opera

I HEAR Hollywood has acquired some competition from, of all people, Mormons. Backed by a computer, Schick Sunn Classics Productions Inc is a film company based in Park City, Utah, many miles from Beverly Hills, specialising in bland, prefabricated, "family entertainment" pictures that, despite being slated by the critics, invariably make money.

Sunn's principal feature is the computerised market research system it uses to plan the films, constructing the story line, choosing the actors, designing the advertising strategy. Traditionally studios have relied on the instincts of executives as to what the public wants to see, but Sunn has teams of researchers who analyse thousands of interviews, press screenings, and questionnaires from prospective viewers, and the films are constructed accordingly to the results.

Charles Seiler, the studio's president says: "You've got to have a 'consumable' product. The movie business is no different than marketing soap."

The computer system cost \$5 million to develop and it takes \$1,250,000 a year to run, but it pays. The films are made on shoestring budgets, with non-union crews and so forth, producing results described by Time magazine as "technically inept" and by Judith Crist of TV Guide as "formulaised and thoroughly B-minus". Unfortunately, they make vast sums of money — \$28 million gross in the case of "In Search of Noah's Ark".

Many of the films are adventure stories of the Wild West, full of grizzly bears and so forth. Others have been "Beyond and Back", about the experiences of people who revived after being declared dead, and "The Lincoln Conspiracy", a Watergate-style investigation into Lincoln's assassination. Sunn can predict with considerable accuracy how much money each will make.

Soep, indeed, if Eisenstein were alive today he'd be spinning in his grave.

"Our next film will be The Osmonds Meet the Mummy That Time Forgot..."

I've had a complaint about the sexist picture on our front page from a girl model greeting her employers' new computer. To nullify, and on the principle that two wrongs make a right, I put another sexist picture, of a Redford desecrating system being delivered to ACT Service, Southampton. The PR female person who had the photo taken describes the removal man as "really dinky", and goes on to say that he looks like John Travolta. Surely he is that handsome figure I see on posters in the Tube? I suspect her glasses need a overhaul.

MY scout in New York has found what could be a loophole in the rules and regulations designed to control the flow of Western high technology to the Eastern bloc. While people in the UK, the US and some European countries can buy personal computers over the counter, these machines cannot easily be exported. The processors for the homebrewed buff are built round Z-80, 8080, and 8800 devices which are often a very advanced design and include components that may not be sent to certain countries under Cocom and other government restrictions.

Nevertheless a steady flow of these machines seeps through the barrier by way of the computer stores. In Manhattan, for instance, there are several computer retailers headquarterd and among their customers are many from the delegations there. Some, hints

I've had a complaint about the sexist picture on our front page from a girl model greeting her employers' new computer. The PR female person who had the photo taken describes the removal man as "really dinky", and goes on to say that he looks like John Travolta. Surely he is that handsome figure I see on posters in the Tube? I suspect her glasses need a overhaul.

Home-brewed exit loophole

MY scout in New York has found what could be a loophole in the rules and regulations designed to control the flow of Western high technology to the Eastern bloc. While people in the UK, the US and some European countries can buy personal computers over the counter, these machines cannot easily be exported. The processors for the homebrewed buff are built round Z-80, 8080, and 8800 devices which are often a very advanced design and include components that may not be sent to certain countries under Cocom and other government restrictions.

Nevertheless a steady flow of these machines seeps through the barrier by way of the computer stores. In Manhattan, for instance, there are several computer retailers headquarterd and among their customers are many from the delegations there. Some, hints

vented design and include components that may not be sent to certain countries under Cocom and other government restrictions.

Nevertheless a steady flow of these machines seeps through the barrier by way of the computer stores. In Manhattan, for instance, there are several computer retailers headquarterd and among their customers are many from the delegations there. Some, hints

My scout, could be signs of foreign governments. They pay cash for the goods, and there is no way of knowing the destination of the machines. Once in the hands of the foreign diplomats — or spies, if you like — the computers can be wrapped to packing that is immune to customs inspection and shipped out.

Perhaps we should now have security clearance to drive a soldering iron?

IBM and Xerox settle patents suits out of court

A SETTLEMENT out of court has been reached between IBM and Xerox in the patents suits they have been fighting against each other. The two companies have agreed to drop all litigation and grant licences to each other for all their patents. In addition, IBM will pay Xerox \$25 million.

Xerox first sued IBM for infringing patents in 1970 when IBM brought out a plain-paper copier in an attack on a market hitherto dominated by Xerox. IBM retaliated earlier this year by suing Xerox for infringing its word processor

patents with the Xerox 800 series Electronic Typing System (CW, March 9). Over the intervening years Xerox brought several more suits against IBM, both in the US and Canada, and only one was concluded — a Canadian suit which Xerox won.

The chairman of the two companies, Frank Cary (IBM) and Peter McCullough (Xerox) issued a joint statement in which they said that the patent disputes had "resulted in significant cost and a substantial drain on management time, product development and legal resources of

both companies. Putting these issues behind us will enable each company to concentrate on the basic business of dealing with the opportunities of the marketplace."

Under the new arrangement, the sharing of patents will cover all of both companies' products, and will apply to all patents existing now or applied for over the next five years. There will be no charge for the use of any of the patents, apart from the lump sum of \$25 million IBM is paying now.

The agreement covers computer

patents as well as those of copiers and word processors, but as Xerox is no longer in the mainframe business this is unlikely to be of significance.

Although they are no longer suing each other, neither company is out of the litigation woods yet. Both are being sued for monopolising their markets, IBM by the US government, and Xerox by two other copier makers, SCM Corporation and Van Dyk Research Company. A jury in Connecticut last month found in favour of SCM, but has yet to assess the damages to be paid.

Tories to let Dol micro policies run course

A FUTURE Conservative government would allow the current Department of Industry schemes to invest around £100 million in microelectronic manufacturing and use (CW, August 3) to run their three to five year course. But there would still be a radically different approach to government involvement in the industry, according to Sir Keith Joseph, the Conservative Party industry spokesman (writes Martin Banks).

"The role of government as customer will be a key element in the Conservative party's relations with industry if it is returned to power," said Sir Keith in an exclusive Computer Weekly interview.

Such a relationship, he said, should be concerned with

pushing the "state of the art" in design philosophies and concepts, but should not be concerned with defining particular designs. "The government's role should be in laying down specifications against which industry can design products that have the widest, preferably world, market," he said.

This method of supporting and promoting industry has been standard practice in the Ministry of Defence for a long time, he said, but many other government departments with similar purchasing power could do the same.

Following his recent criticism of the Post Office in this respect, he added that he felt it was not showing signs of improving its relationship with suppliers.

The Department of Industry

schemes, he said, were time limited, and were due to run out "within three to five years." They would be allowed to run their natural course, and would not be dismantled, he said, but the Dol would not be encouraged to "sell" the schemes to industry on a continuing basis.

Sir Keith said "I am not enamoured of the proliferation of subsidies to industry, they do more harm than good. There may be a special reason to justify it, but that cannot be assessed from opposition."

While not approving of the method of support for the microelectronics industry, Sir Keith has already said that the Conservatives would honour existing commitments made to industry, if they won the election (CW, August 3).

ITT into word-process Orbit

WORD processing products, a group of remote batch terminals and an alternative to IBM's protected local processor code-named Orbit are all planned by ITT, according to Jim Foord, the newly-appointed director and general manager of

ITT Business Systems Group (UK). Orbit is expected to be a 32-bit minicomputer for use in distributed processing applications as a replacement for the IBM 3790 system and is likely to be announced by the end of the year (CW, June 8).

Foord said that ITT was waiting for IBM to introduce Orbit before making a move. There was no intention of introducing a direct alternative to the IBM 3790 remote communications systems before then because Orbit was likely to supersede the 3790.

Foord told Computer Weekly that ITT would be "med" to stay out of the word processing market and was definitely making moves in that direction.

He said ITT's policy was to concentrate on the electronic office and data communications markets. In the latter area with its IBM compatible products, but it had no intention of challenging IBM with plug compatible disc or tape drives.

One area to which ITT was "totally committed," according to Foord, was the remote batch terminal business, and ITT would be launching a group of RBT systems later this year, weighing in against existing suppliers like Delta 100, Harris Systems and Four Phase, as well as against IBM itself.

The new products would be new versions of the 3630 RBT introduced by ITT last year (CW, September 22, 1977). Foord said the 3630 had not proved satisfactory for the market and was no longer being sold.

PO £24m order

TO upgrade its UK telex network the Post Office has ordered 12,000 ITT Creed 2300 teleprinters worth a total of £24 million. Delivery is due to be completed by the end of 1979.

Basic Timesharing seeks systems builders

SYSTEMS builders are being sought by Basic Timesharing to write application software and sell the BTI 4000 business timesharing computer system to specific market sectors.

The BTI 4000 is built around Hewlett-Packard 21MX motherboards by Basic Timesharing in California, and runs a proprietary BTI operating system, key features of which are security

New computer storage method based on lasers

Storage arrays with a density of 100,000,000 bits per square centimetre could be commercially available in the not too distant future if the work being carried out by these scientists at IBM's research laboratory at San Jose, California, comes to fruition.

The storage technique the scientists are working on is called photochemical hole-burning. A laser beam is concentrated on a sample of photoactive material and the frequency of the beam is set at a number of precise levels in order to change the chemical nature of the molecules that are receptive to those specific frequencies. This means that the material can no longer absorb light at those frequencies and the "holes" created can be used to represent binary ones while the absence of a "hole" can indicate a zero.

According to IBM, the frequency absorption peak of the material is wide enough compared with the laser frequency to allow 1,000 "holes" to be burned. They can then be used by reducing the power of the laser and varying its frequency over the same range as that used for writing.

This frequency addressing method could enable 1,000 bits to be stored in an element of photoactive material one micron in diameter, and 100,000,000 elements could store 100,000,000,000 bits in an area of one square centimetre.

A US patent entitled "Frequency Selective Optical Data Storage System" has just been awarded to four IBM scientists working on the project. The three in our picture (from left), Dietrich Heiser, George Castro and Roger MacFarlane, are shown adjusting an apparatus that projects light from a laser on to a sample of photoactive storage material.

George Castro, who is manager of the physical sciences department at the San Jose lab, says, "We have a long way to go before this can be made into a technology. So far we are investigating a variety of potential storage materials and are trying to understand the temperature limitations of the phenomena." The technique works only when the photoactive material is cooled to nearly absolute zero, the temperature at which thermal motion ceases.

Weinstock's view of the computer industry

TAKING issue with a statement in last week's Computer Weekly that he was "lukewarm towards the computer industry," GEC managing director Sir Arnold Weinstock told Computer Weekly that he views the computer industry as very important to GEC.

Underlining the commitment being made by the company, to the GEC Computers subsidiary.

Royal medal for Prof Kilburn

COMPUTER pioneer Professor Tom Kilburn has received one of this year's three Royal Medals, presented by the Queen on the recommendation of the Royal Society.

Professor Kilburn, who is provost-chancellor of Manchester University, is already an FRS

and a Distinguished Fellow of the RSCS. He receives the Royal Medal "for his striking innovations in computer hardware over 30 years." With the late Professor Fred Williams, Professor Kilburn built the world's first stored-program computer, the Mark 1 at Manchester.

software alongside the general accounting packages, and Cars, which runs a bureau on one BTI 4000, uses another for program development, and sells the system to its customers in Ireland. Basic Timesharing would like a dozen UK distributors, each operating in a specialised market area which does not conflict with any of the other distributors.

NEWBURY SMART MICRO-BASED VISUAL DISPLAY TERMINALS

Model 7008-7009

- * British design and manufacture
- * Based on BOBOA Micro-processor
- * Two-page Memory 3.840 Characters
- * 24 Displayed Lines of 80 Characters per line
- * Switchable Transmission Speeds from 50 Baud to 19,200 Baud
- * Split Screen Transmission Mode
- * Dual Interface—CCITT V24 and 20/60 mA Current Loop
- * Hard Copy Printer Output
- * Protected Field Forms—Blink—Background or Highlight
- * XY Cursor Address (send and receive)
- * Roll or Page Mode
- * Video Output for External Monitors
- * Full Character Editing Features
- * Block Transmission from Screen by Line or Page
- * Green Phosphor Non-glare screen

Model 7001-7002

- * 24 Lines of 80 Characters per line
- * Selectable Baud Rates from 50 to 19,200 Baud
- * Dual Interface—CCITT V24 and 20/60 mA Current Loop
- * Teletype Compatible
- * Hard Copy Printer Output
- * Selectable Half or Full Duplex
- * Video Output for External Monitors
- * Green Phosphor Non-glare Screen

Model 7000

- * Teletype Compatible
- * 24 Lines of 80 Characters per line
- * Selectable Baud Rates from 50 to 19,200 Baud
- * CCITT V24 Interface
- * Selectable Half or Full Duplex
- * Green Phosphor Non-glare screen

GILB'S MYTHODOLOGY

Professional challenge of 'good' programmer

TRADITION dictates that a good programmer is capable of producing error-free programs, in a short calendar time, which run very quickly in operation and which take little primary memory space during execution.

Unfortunately tradition is rarely a useful guide when applied to a rapidly changing set of human and machine economics.

Let me give my particular definition of "programmer" for the purposes of this discussion without pretending that it is the "right" definition for the whole world.

A programmer writes source code for machine interpretation, and carries out a varied set of associated tasks in order to arrive at the source code and to verify reasonable correctness and future usefulness of the program.

The programmer is not primarily a designer of the system, but is primarily the function that translates a reasonably detailed design into a practical working program and associated test data, documentation and control statements.

This above definition does not preclude the programmer from performing application analysis, system design or project management — but these are other roles, which I am excluding from this discussion.

Now, what is a "good" programmer? My general answer is one who can translate the system specification into a working program and meet any feasible specified set of goals and constraints.

Notice that I did not say anything about getting the job done quickly, or writing elegant structured logic. The list of potential programming goals and constraints may be long and varied from time to time. The goals and constraints can vary in degree and nature to which are specified or all.

The goal/constraint list might include such varied factors as ease of expansion of logic in the future; maintenance ease; portability; failure reliability; automatic recoverability from error situations; and degree of automatic testability.

This list is in no way intended to be complete, but only to stimulate us to remember some of the attributes which a programmer might be expected to produce.

Notice that I have not included space or speed requirements, partially because they are obvious, and partially to dramatise the point that they may not be critical to a given application.

The better a programmer is, the better he or she can respond to any set of requirements for program quality, and

to any set of levels or degrees of those qualities.

The varied requirements have a staggering number of permutations. The professional programmer must be prepared to learn a very large number of technological approaches for constructing programs to meet these requirements.

The programmer must be prepared to update this knowledge as new methods and techniques develop, and this is a staggering task which even at present requires the use of a handbook of current practice and products, rather than any attempt to learn it all by heart.

I realise that many programmers' real world is limited to getting the functional applications requirements apparently working in a minimum of time, that they are rarely required to do more initially, and that there is very little reward in most environments for initiating quality improvements which the managers, users and designer/analysts should have specified, but failed to do so.

But we are maturing as a profession; an increasing number of working environments will be looking for and rewarding the highly professional programmer. One who is not caught up in the outmoded and inflexible

dogmas of structure or testing or documentation or language, but who is prepared to make the fullest possible use of the known programming technology in order to meet the quality requirements of the users — however unusual these may be compared to the run-of-the-mill program.

The "good" programmer is fully aware of the tools of the trade, and their limitations. He or she is able to "know what they do not know" and admit it to others — and then to enhance their knowledge by looking for answers. Becoming a "good" programmer is a continuous professional challenge.

Old methods never die....

RONALD WARMINGTON'S remarks (CW, July 13) on my "Verification is dead — almost" column (CW, June 19) are most welcome. I cannot disagree with the points he makes and find his examples of the limited survival of verification most useful.

I would particularly like to thank him for bringing up the aspect of fraud prevention. I must admit that I was not conscious of this aspect of verification. I was engrossed in the cost/ineffectiveness aspects.

It would be most interesting if Mr. Warmington or other readers would care to comment on their experiences with multiple person data entry verification techniques as a fraud prevention and detection device. In particular, I should like to see this compared with the option of using automatic checks on a single human data entry operator.

Certainly my hypothesis was rather strongly worded in an attempt to provoke reevaluation of the use of verification. I don't think it will ever totally be obsolete, since it probably has a set of properties needed by special applications, which is a better

technique for that application. Old techniques, like Old Soldiers, never die, they just fade away.

GIM offers 32K ROMs

TWO versions of a 32K bit ROM, offering 480 and 3600 random access time respectively, have been added to its range of memory products by General Instrument Microelectronics. Known as the ROM-3332, the ROM is a fully static device that can be used to replace directly in redesigning. According to the company, the ROM-3332 is available in a 16-pin DIP package or a 28-pin DIP package.

SOFTWARE FILE-1

Buffer to eliminate printing bottlenecks with teleprocessing

WITH the addition of remote printer buffering to its IBM replacement TP minitasker Thirst, Brown's Operating System Services aims to eliminate a major bottleneck associated with remote printing to IBM 3270 or equivalent printers.

With most TP monitors, remote printing is slowed down considerably by the inability of the printer to buffer transmitted data while it is printing. The printer, able to perform only one job at a time, has to wait to receive a complete block before it is able to print and therefore never reaches maximum printing speed.

With the new Thirst feature, a user can designate as a buffer any device which is attached to the same control unit as the printer. The designated device, for example a display, takes over the job of receiving the transmitted data.

Developed in the UK and available in the UK and Europe for the last seven years, Thirst has been notably successful in achieving fast response times in

DOS and DOS/VS sites supporting large numbers of terminals. Brown's Operating System Services also markets an online program development system called Shaft. Including a source library update facility, the software enables programmers to amend and list a program, submit it for a run, and examine results all while sitting at a terminal.

A stand-alone package, it can be run on DOS/VS systems either with or without a monitor. It uses a 64K video partition, 16K of which is shared and rents for £1,200 per annum for a three terminal system, further £400 per year is payable for each additional terminal. Latest to install the software was Unichem Ltd, a pharmaceutical wholesaler, which operates a 370/148 supporting network of over 200 terminals. Unichem chose the product because it "outperformed all the others", according to its IT manager, who added: "We have noticed some spectacular productivity improvements."

Shrinking data storage for IBM OS users

A SOFTWARE product introduced to Europe and the UK by Informatics SA offers IBM OS users substantial data storage and transmission economies as well as an unusual approach to file security.

The system, Shrink, provides generalised routines for data compression and encryption. It works by analysing each file to identify the most frequently used byte combinations, which are then coded as bit patterns.

The recording is said to be able to achieve major savings in storage requirements, typically reducing a commercial application file to between 20% and 40% of its original size.

As well as reducing online storage needs, the compression

of data can also reduce line and modem requirements and costs in computer-to-computer communications and data transmission. Similar savings are possible in channel utilisation, reducing turnaround time on I/O bound jobs and improving throughput.

Security benefits arise from the fact that Shrink encodes each file uniquely. Thus even if data is stolen, it becomes meaningless without the system's decryption keys.

Shrink is accessed by C commands incorporated into application programs and standard read/write statements. Said to have low memory and execution overheads, the system can be specifically instructed to leave record key areas untouched.

Real time disc subsystem

A DISC subsystem for use in real time applications based on the PDP-11 is being implemented by Gemini Industrial Systems for ICI. It is designed for systems in which limited core store is available for sequencing programs. The disc subsystem allocates sequences of programs a priority according to their rate of use and stores them on disc. Those with high priority are permanently loaded into memory, while those with lower priority are overlaid into memory as required.

The system is for use with a process control package written by ICI in RTL/2 for batch processing. Gemini UK has been closely involved in the development of the package, which uses ICI's multi-tasking operating system, MTS/32.

Mid-Cheshire firm

CLAIMING to be the first software house in mid-Cheshire, Pentagon Computer Services formed in June. It says the firm has "considerable experience" of IBM, ICL, and Burroughs systems but plans to concentrate on specific mini and micro market sectors. Its offices are at 390 High Street, Wigan, Cheshire. Tel: 06905 65450.

Puzzler

THIS diagram shows the only way (not counting rotations and reflections) to place 16 knights on a 10 x 10 board so that all unoccupied squares are under attack by at least one knight. There is no way to do the job with fewer than 16 pieces.

This week's problem is to carry out the same task on a board using the minimum number of knights, which is 12. For that area, which is a 10 x 10 board, the knights are placed as follows:

SOFTWARE FILE-2

BCS Codasyl debate

A conference on Codasyl database developments is to be held by the British Computer Society at the South Bank Polytechnic in London on September 4. The speakers, members of the BCS Codasyl DBAWG and ODLC, will include Ed Toter of Arthur Andersen and Rager Tagg of School.

The registration fee is £20 for BCS members (£10 for students members) and £25 for non-members. All delegates will receive a copy of the 1978 Codasyl Data Definition Language Journal of Development.

Pentagon funds SIL based on Pascal

THE US Department of Defence is funding the development of the first compiler for a new systems implementation language based on Pascal. Called Euclid, the language is specifically designed for writing systems software that must be verified.

A major objective of the research is to improve the reliability and security of system level software, by facilitating the production of code that is

certifiably correct. The compiler is being written as a joint venture by the Toronto University and the unmeshing company I. P. Sharp, best known for its expertise in APL. The work is being funded by the Advanced Research Projects Agency of the DoD (ARPA), which also set up the project to design the language. Although the software will be the property of the DoD, it is intended that the work will

Cross refs in preprocessor for DEC Coral

A PREPROCESSOR for Coral and a file handling system, currently written in DEC Coral for the PDP-11, are the latest packages to be announced by consultants Brampton and Brampton, previously based in Lewes, Sussex.

The Coral preprocessor, itself written in DEC Coral, offers three main facilities: source code reformatting; the generation of cross reference listings; and the ability to

code Coral reserved words in shorthand form.

Source code formatting, which is thought by some to be a function better left to the computer than to the programmer, is designed to show clearly the block structure of the program by the use of systematic indentation.

Statements at the same logical level all begin in the same column and labels are

left-justified to the edge of the listing. Similar processors have been developed in the past by the Royal Signals and Radar Establishment, Malvern, and by Stephen Howe (Consultants) Ltd.

The new package is notable for providing in addition a cross reference listing. This summary, output as a comment after the FINISH statement, lists all identifiers and labels in alphabetical order with each occurrence documented by line number. The software is sold by Brampton for £500.

The other new package, Varfile, provides RSX-11 and IAS users with a flexible filing system said to be particularly suitable for online and data base applications. It can be accessed by any language running on the PDP-11.

Particular features include support for variable length records and variable length keys within one file; a facility for generic operations, using partial keys; and the dynamic mapping of user files onto logical units.

Benefits claimed for the system include fast operation, efficient use of disc space, and easy file handling. The package, which is also being implemented in PL/I for IBM 370 systems, is available for £4,000 and can also be rented.

● Brampton and Brampton, which also markets aids called Cosh and Coin for Coral string handling and interactive testing respectively, has moved this year to: The Old Thatch, Cardinals Green, Horsehead, Cambridge. Tel: 0223 891725.

Online maintenance of Fleet program library

AN online version of the Fleet program library maintenance system has been announced by SSI for IBM DBS and DOS/VS users.

Fleet Online allows programmers to update source programs interactively and examine the output from compilations and test runs on a video terminal before routing output to the line printer.

Users of SSI's Grep may in addition use the system to submit jobs to the batch input queue.

The software runs in a 64K batch partition and is thus not dependent on a TP monitor. Up to seven display screens can be handled simultaneously, which may either use individual libraries or share program libraries.

Aussie DBMS for NCR machine is launched

A DATABASE management system that runs on a range of NCR machines has been developed by Standish Consulting Services, an Australian software house based in Melbourne, according to published reports. The system, Access, is said to be available for NCR Criterion and 4400 series equipment, as well as on the older Century series systems. It is thought to be only the second DBMS supported on NCR hardware, the other being Cincom's Total.

The provision of aids for converting from Total suggests that at least part of the market anticipated is formed of existing Total users. In addition to being logically compatible at file level, the system offers a bridging facility such that Total application programs do not have to be recompiled on changing to Access.

Said to offer features including easy-to-use data definition and data manipulation languages, extensive run-time diagnostics, and dynamic buffer allocation, the system also provides utilities for database back-up and restore and database recovery.

● The news follows reports that both Cincom and Honeywell have shown interest in Pobil, an end-user oriented language also developed in Melbourne, Australia (Software File, May 26).

Interactive Cobol

AN INTERACTIVE version of Cobol has been announced by Ventak for use on its Datapoint computer systems. Compatible at any system with at least 48K bytes of memory, the language includes features for screen formatting and operator prompting, as well as facilities to accept, reformat, edit, and process online data input.

Details of Univac production control pack

WITH the formal launch of the package in the UK, more information has become available on the manufacturing control system developed by Univac for the BCT small business computer (CW, April 6).

Designed for small and medium sized manufacturing businesses with turnovers between £500,000 and £7 million, the production management package is intended to be set up and run by production management staff themselves.

The system, designed for predominantly batch-orientated manufacturers, consists of three main modules: bill of material and inventory control; scheduled receipts; and materials requirement planning.

On a parts master file and product structure file, provides a range of explosion facilities, yielding such information as component use quantities either directly or as an input to other modules, for example requirements planning.

The latter function handles a time-phased production plan of end-products over up to sixty forward periods. By comparing predicted component requirements with stock on order information, net requirements can be identified, off-set by supplier and manufacturing lead times. A complete hardware/software system, requiring no specialist or computer staff to operate it, can be rented from about £500 per month, notes the company.

Generating N/C tapes from desk-top machines

A COMPANY which specialises in engineering application software for Hewlett-Packard systems has produced two packages for desk-top computers which generate tapes for numerically controlled machine tools.

The packages, which are available from Engineering Computer Services Ltd, run on HP-8825 systems and implement the APT 100 system for machining centres and the AP 200 system for turning centres. The software includes post-processors which convert the basic geometry into machining instructions for specific machine tools.

Said to include tape prepara-

tion and verification facilities sufficient for about 90% of all NC work, the systems are targeted at two main categories of user: first time users currently preparing tapes manually or using a bureau; and those wishing to extend existing in-house capabilities.

The programs, which use question and answer techniques and are written in an APT-type language, cost £2,750 each, and the post-processors between £400 and £700. The company will also supply complete systems including hardware from around £15,000.

● Engineering Computer Services is at Pileadilly, Tamworth, Staffs. Tel: Tamworth 872084.

Using Telex terminals as a link to a network

THE widespread availability of Telex terminals must have prompted many to consider their use as a link to a computer network, particularly where a company is reluctant to hire or buy a terminal solely for DP activity.

In addition to being commonly in use already by many multi-centre offices, Telex facilities have the further advantage that Telex lines to Europe and elsewhere are in general more reliable than telephone lines for data transmission.

The relatively slow speed of the Telex system, viz 15 cps, limits its use in real-time and plugging lengthy outputs. However, the system can be adapted easily for submitting queries and receiving short responses.

In its input role, the best tactic is to prepare paper tape input offline and feed it through the reader, once the terminal has been connected to its destination. With a machine such as the Teletype 15 Auto, this method is both effective and also helps to minimise the error rate.

However there are snags. One problem is that the input is not under the control of the receiving computer — the Telex terminal acts rather like an operator who never stops typing. Also buffer sizes are small so that data can be lost if

much processing is performed on each input record. In addition, end-of-record can be a problem as it is indicated by a series of characters — carriage return and line feed — rather than by a single code.

Many common Edit Build file type commands will accept either characters as a record terminator, but having taken carriage return as end-of-record, line feed will be interpreted as a null record and, therefore, end-of-file.

So the input program itself must handle null records, which is virtually impossible with a Build-type command system. A special terminator is also required for end-of-file.

After end-of-file it is normal to allow a few inches of blank tape to feed through. However, the Telex character set does not include a null character — corresponding to no holes punched — so a wait command should be included, say for five seconds, to allow the tape to end.

This is because, until the tape has ended, it is not possible to return a message reporting that the data has been accepted, or to return an exception report. Aides On-Line at Escom, has been using Telex in this role for many years and has found APL an ideal language for writing a Telex input program, including routines to translate the Telex character set.

information privacy

Integrity availability security

INFORMATION PRIVACY will cover the technical, legal and social issues of computer-based information systems and their use. Hardware, software and security considerations will be covered in detail as will the needs for an application of legal controls, codes of conduct and practice and social implications.

OP SPOT

Realistic career paths for operations staff

FOR the typical operations person, the trip up the promotional ladder is swift but soon ended; he climbs quickly to the level of senior operator but finds further progress very hard going.

This is a sad and wasteful state of affairs. It is frustrating for the staff and detrimental to both the companies concerned and the computing industry as a whole.

To rectify the situation, and so make use of the vast wealth of ability and experience that exists within operations, we need a change in the attitude of companies, a greater awareness from operations managers, and a broader definition of the term "operations." In a nutshell, we must have realistic career paths for operations staff.

The first step is conceptual in nature. The computer industry

management potential of operations staff. Remember that on the evening and night shifts, the role of the person in charge is primarily that of decision-maker, often under pressure.

Taking these factors into account, a realistic career path would lead either into technical support roles, including troubleshooting, or positions which call mainly for supervisory ability. In the latter case the progression might well mean moving out of the computing department.

Add to this the fact that more and more sites are implementing TP networks of one sort or another, and we have another direction in which operations staff may progress. In fact a move into TP would prove to be very interesting. It calls for a thorough understanding of the workings of the system, and provides the opportunity to visit the sites of the users.

If operations staff wish to move into programming or systems analysis they should be given the opportunity to do so. A good method is to move the operator to the department concerned for a trial period of a month or two. If he is happy there, and the department is satisfied he has the ability for the work, the transfer should be made permanent.

Of course, the part played by the operations manager is of great significance. He must take an interest in his staff, and take the trouble to find out what their abilities are and where their interests lie.

He must carry out staff appraisals every three months or so.

Taking the operator's abilities and interests into account, the computing courses he will be sent on should be worked out. It is important for him to attend the courses at the right time if they are to be instrumental in shaping his career.

Fortunately, some companies are aware of the importance of the talent that exists within their operations team. At BOC Datasolve, for instance, the progress of staff is monitored closely, with a view to placing staff in positions for which they are suitable.

John Robbins, who is Datacentre manager at Data Spot, says:

"Operators often complain that nobody listens to their point of view. We at Data Spot are listening, and we would like to hear your opinions and ideas on all matters relating to computer operations."

Your letters should be sent to: Op Spot, Computer Weekly, Poynt House, Stamford Street, London SE1 8LU. Telephone calls are equally welcome and Bernard can be contacted on 01-405 8238.

Fully endorsing Stevenson's views, I would add that management must be aware of the

solve's site in Oxford Circus, told me: "We view operations as a sort of starting point. We keep an eye on the staff to see what attributes they have."

But operations staff must take the initiative themselves. Speaking at the aforementioned DPMA meeting, Jack French, operations manager at the Bishopsgate site of the Bank of Belgium, said:

"Many operators are not sufficiently interested to become involved in technical matters. Too many are just interested in getting home early."

Before French's staff set about lynching him, I must point out that he went on to say that those with the right attitude and motivation should be encouraged and helped to move into technical roles.

The point about attitude is of great significance. Let's be clear about what I consider to be the "right attitude" from operations staff. It is all about investigating technical matters at a level slightly deeper than is considered the norm. It also concerns taking the trouble to ask questions and reading technical manuals which are often quite difficult to understand.

I emphasise this point because it is the one which some opera-

tions managers and the majority of DP managers always seem to miss. To them the "right attitude" means acclimatising about the computer room and looking busy. To please them, there is no need for technical expertise or appreciation of the system. Just look busy and they will rate you as a good operator.

Finally, let's consider career progression in relation to shift allowance.

Now for a person to come off shift work he must be willing to forfeit his allowance and, if he has been with the company concerned for a considerable time, that might be a reasonable, if not princely, sum.

Some argue that to overcome this problem, operations staff should be encouraged to live off their basic wage and save the allowance. They say that this will prepare the operators for the time when they have to sacrifice the extra money in order to further their careers.

I believe we need a complete rethink about the shift allowance, because at the moment too many companies and staff associations seem to think of it as a perk for operations staff. The role played by operations staff should be reflected in their basic wage.

HINT OF THE WEEK

Successful jobs should be displayed, too

THIS week's hint relates to George 2 macro messages, and is from Ren Linton, who is computer operations controller at Manchester Polytechnic and a regular contributor to Op Spot.

According to Linton, in the event of a production job failing, the operator will have to contact someone in the programming department. He calls for standards to make the operator's life that bit easier.

"To make the failure obvious, it is worthwhile setting up a standard that every job, upon completion, should display to the operators a message of the form 'RUN-OK or RUN FAILED'."

Ren says that these messages should be written into each job description or macro, and explain why it is necessary to

notify the operator of the successful job as well as the failure. He says, "It is not sufficient to assume that there is no failure message that the job is OK, because it is possible for a faulty job description to simply 'drop off the end' and bypass a failure message."

"I have known the latter to happen, with the result that a failed job was assumed to be correct, and a subsequent job was used to utilise the results of the first."

● I'm keen to hear your technical and non-technical hints, and £5 for each one that is published in Op Spot. Please state clearly your name and that of your company, giving a telephone number on which you may be contacted during the daytime.

Union calls for VDU health hazard research

CONCERNED for the health of its members, the National Union of Bank Employees has requested that Lloyds Bank curries out some research into the health hazards of operating VDUs and microfilm readers. Areas defined by the union are the danger of radiation and the long-term effects on the operators' eyesight. The union has

also asked the bank to arrange regular eyesight check-ups for the operators of the units.

In response, members of the bank's medical staff and management are to attend a course on the effects of VDUs on eyesight to be held by the Institute of Ophthalmology in London (CW, February 23).

MICRO NEWS

Hoskyns' hotel pack set for US launch

THE Hoskyns' Hotel System, which started its public existence six weeks ago with an order for a total of five systems for Holiday Inn hotels in this country, is to be sold on the US market through Hoskyns' parent company, Martin Marlette.

And although the company would not comment

officially, it is thought to be actively considering options for covering the European market as well. Hoskyns now holds firm orders and options for over 30 of the Intel 8080-based Hotel System, with two further multinational hotel chains joining Holiday Inns in placing orders.

According to Hoskyns' marketing director, Richard Holway, the Hotel System was a good example of how microsystems could be exploited in a commercial environment, once a definable market sector was identified.

In the case of the Hotel System, the market is the large number of hotels that fall within the 60 to 300 bed range, although the system is capable of coping with hotels with larger numbers of beds.

The system is designed to provide all the necessary "front office" functions of a hotel, in terms of reservations, guest accounting, and administration. To add to this, the company is also working on software to cover the "back office" functions of stock control and ledger work.

To expand its facilities, the company has also worked out the necessary interfacing between the system and Minster Automation's Tiger telephone charging system to enter telephone calls onto guest accounts automatically.

Currently, this data is added in the same way as that from the hotel's bars and restaurants, through specially developed terminals that use simple numeric keypads to enter values and produce code numbers.

One of the novel features of the system is that the central processor and floppy disc storage elements are located in a rack-mounted cabinet.

Finding way in exhibition made easy

FINDING one's way round large exhibitions is usually one of the more tedious ways of spending a day, and the US electronic components exhibition, Wescon, is held in Los Angeles and month, is usually one of the larger shows.

To offer succour to the visitor to the show, and to gain just a little self-promotion as well, Warren Point will be using a version of its London Underground routefinder on its stand at the show, re-programmed to point the way round the exhibition.

Warren Point, which will be part of a large UK contingent of exhibitors at Wescon, have installed the Routefinder for London Transport at the end of the Heathrow Airport station at the end of the Piccadilly line. It provides routing information for travellers on every line on the Underground network, from the starting point of the Airport station. The information is available in four languages.

South Korea link for AMI

US semiconductor manufacturer American Microsystems Inc. of Santa Ana, California, is planning a \$10 million equity-owned joint venture partner in South Korea. AMI's partner is Seoul-based Gold Star Co., a manufacturer of domestic appliances and electronic entertainment, and the new company will be called Golden Microsystems Inc.

AMI will design the integrated circuits for use in Gold Star's products. Production is planned to begin in mid-1979 and the company should provide jobs for 800 Koreans.

TUC to debate the impact of micros

By Robin Webster

CONCERN over issues raised by the impact of information technology, including employment, have been highlighted by resolutions tabled for the TUC Congress in September (CW, August 3).

The resolutions split the problem into two main areas: the need for the creation of a well-defined government policy towards information technology to allow trade union fears over unemployment; and the importance of setting up an indigenous microelectronics industry.

The Society of Civil and Public Servants, for example, has called for greater TUC pressure on the government to develop a viable employment strategy that meets the rapid incursion of information technology into industry.

"The SCPS has concluded that there can be no opting out of the microprocessor development field," said Campbell Christie, deputy general secretary of the SCPS. "We are going to have this industry and therefore we are going to be affected by the development of systems using microprocessors."

"We are most concerned with the social implications, however. For example, the Civil Service is already using word processing systems and these will have a fundamental effect on the employment of secretaries."

The 'electronic office' with facilities such as electronic filing and electronic mail, is possible. The consequences for employment are horrendous."

The SCPS has proposed that steps be taken by the government to ensure that there are enough trained people to meet the manufacturing requirements of both hardware and software fields.

On setting up a UK microprocessor manufacturing capacity, Christie believes that it is imperative for the government to go beyond the National Enterprise Board's initiative in setting up Immos, its venture into semiconductor manufacturing, and that the TUC could play the role of catalyst.

"Something positive has to be done about the introduction of the microprocessor," he said. "It is not simply a further development of the computer. It is much more fundamental; it is significant as the development

of the steam engine or electricity."

In a similar resolution, AUEW/Toss supports the SCPS view. "The prerequisite is a publicly-owned home electronics industry and the setting up of preferential procurement policies," said Ian Benson, a divisional officer for Toss, and chairman of the NEDO working party.

"With this we can then phase in new technologies. Now that we have a State-funded manufacturer in the NEB's Immos venture, if any US companies want to get into the UK as a market area, they should have to use Immos as a second source."

"Immos goes some of the way, but it should be built upon," he added.

Representing 125,000 Post Office maintenance engineers up to supervisory levels, the Post Office Engineering Union cites the forthcoming introduction of the Post Office's System X, and its current TXE 4 installation as an example of the "industrial consequences" of new technology.

Commenting on the TXE 4 and System X worries, a spokesman for the POEU said: "There could be some major problems when the Post Office introduces these systems into the network and, while a lot of money is being spent on System X research, the human side of the situation seems to have been ignored."

"The Post Office has nobody who is concerned with the industrial relations problems that may arise from the implementation of such technology."

The Post Office, however, denied that this was so and said

that while there was no one person or department set up to deal with the problem, "positive assurances" had been given to the engineers on job security.

"We have guaranteed their jobs for five years ahead," said a PO spokesman, "and this agreement will be updated at yearly intervals."

Other resolutions on these topics have been tabled by the National Union of Bank Employees which urges the TUC General Council to produce a report on the "structural unemployment precipitated by these particular innovations (automation and computerisation)"; APEX, the Association of Professional, Executive, Clerical and Computer Staff which is seeking a one-hour reduction in the working week each year for the next 10 years until the 30-hour week has been attained; and the Union of Post Office Workers, which also calls for a shorter working week.

Speeding the ambulances

Computer-aided ambulance scheduling is being used by the South Yorkshire Metropolitan Ambulance Service in arranging over 2,000 ambulance journeys a day for the Doncaster, Barnsley, Rotherham and Sheffield areas. The £40,000 system, which features a Data General Nova 3 minicomputer and six ADOS Regent VDU's, supplied by Terminal Display Systems of Blackburn, provides schedules with access to a constantly updated

file on hospital and patient information, and is expected to considerably reduce the normal scheduling time.

Based on a purpose-built centre in Fairfield, near Sheffield, the system will also provide hospitals and clinics with a daily log giving advance warning of patients arrival.

● Our picture shows an ADOS Regent 100 VDU being used by a scheduler at the South Yorkshire Ambulance Service.

Japanese relax guidelines

AS forecast last year (CW, November 10, 1977), MITI, the Japanese Ministry of International Trade and Industry, is to relax its rigid guidelines for the national computer manufacturers.

MITI is responding to foreign criticism of its policies, but also accepts that its rigid direction of the industry has been only partially successful. It will now take a back seat.

A significant failure has been the "shot-gun marriage" between Fujitsu and Hitachi which was intended to force the two manufacturers into close collaboration but has in fact resulted in Fujitsu and Hitachi competing as fiercely with each other as with IBM.

The enforced marriage between NEC and Toshiba was marginally more successful, but came too late to save Toshiba, which has now thrown in its hand and ceded almost all its mainframe interests to NEC in return for an equity stake (CW, July 27).

THE FLEXLEASE BALANCE

Atlantic's FLEXLEASE balances the low cost of long-term leasing with the flexibility of short-term commitments.

- Cheaper than TLP
- No Penalty CPU Changes

Minister sees ERA's MP...

ON a visit to the Leatherhead Laboratories of ERA, a Department of Industry parliamentary under secretary, Leslie Huxford (Lab, Nuneaton), was shown the MP Experiment by one of its developers, Chris Navabi.

Despite its name, the MP Experiment has nothing to do with members of parliament but could be a useful aid to any computer layman wanting to acquire a basic appreciation of how microprocessors work and how to use them.

Built at Sturges, West Cambridgeshire, the MP Experiment is a Standard Electric 8080 and 8085 microprocessor system, which can be configured for an extensive

Complex

ANNE RHODE (Letters, July 27) disappointed me. Dealing himself as Complex he omitted to include a middle line, surely this should be: "I am not an electronic engineer, he can be forgiven as he probably uses the imaginary."

KEVIN J. O'MEARA
Thurston Software Consultants
Barnetford Aerodrome, Essex

Involve the user at all stages

THE Focus piece on charging out (CW, July 27) has annoyed me both as a 13-year DP man and as a purveyor of project management systems. Most of the DP Me I speak to are including a charge back mechanism in their time recording systems because they realise that "if a company requires a new application then it must be of value" is just not true.

Users often request a new

This is a 13-year DP man

PEOPLE

Unilever Executive for data services

AN executive to control the data services division has been formed at Unilever Computer Services. It will be chaired by Len Rawle, who is chairman of the company.

Head of national marketing, Ronald Bain; Ray Teo, who is head of Unilever's marketing, and Fred Moyden, head of the computing division, are the other members of the executive.

Ray joined UCSL soon after its formation in 1970, from Plessey, and was appointed national sales manager in 1973.

A founder member of UCSL, Teo was the first account manager and became sales manager in 1973. Moyden is also a founder member, and was operations manager of the Unilever Research Laboratory before becoming head of the computing division.

Appointed data services development co-ordinator with UCSL is Roger Tomlinson, previously in sales. He joined the company in 1970 from the University of Aston where he was a lecturer in Maths and Computing.

New address for IDPM

This week the Institute of Data Processing Management moved into its new central London headquarters at 12/13 Henrietta Street, WC2. The offices have no telephones because of the over-the-ban and work to rule by Post Office engineers, and for the time being the institute may be contacted via the former IDPM offices at Maidenhead, tel 0628 29879.

Bob Horrobin, Mike Bromley, Tony Burgess, Gopal Brar and Jim Barnes are the directors of Pentagon Computer Services, a software house recently formed in Winsford, Cheshire. Horrobin was previously a senior project manager with Data-Skill; Bromley and Burgess were consultant programmers with Arc-Systems; Brar was a programmer with Data Logic; Barnes was a freelance consultant.

Alon Fagg, previously a district sales manager in the disk-top systems group at Hewlett-Packard, has joined Engineering Computer Services as sales director.

Bill Bignell of Four-Phase Systems has been promoted from Southern region salesman to sales manager in the UK.

Michael Casuar becomes engineering manager of Compeda Inc, the US subsidiary of Compeda. He was previously with Isopile Ltd. Raymond Kush has been appointed technical representative, based in San Francisco. Formerly he was general manager of Apollo Technology Inc.

David Rhys-Davies has joined Jenson Computer Services as project leader for the implementation of a stock control system. He was previously a systems analyst at Green Shield. Programmer Bill Pathman becomes technical project leader for RSTS/E support and for AXCESS, RECMON and MENTOR.

Promoted from systems analyst to project leaders are Dava Kearns and Andrew Brown. Kearns has responsibility for a stock control system for oil rig support, and Brown will cover a turnkey order entry/ledger system.

Trainee programmer Chris Mathews has been promoted to analyst/programmer, specialising in Jenson's accountants' packages, and Dave Nuttall, formerly a programmer with Rascal Radac, has joined Jenson, also as a programmer.

Robert Bevan has become director of North American sales with MSI in the US. He was previously a regional sales manager with the company. Aubrey Easterlin has become director of major account sales with MSI.

We're having a Ball!

COMPUTER WEEKLY CHARITY BALL

Friday October 13 at the Royal Lancaster

Computer Weekly is holding its third annual Charity Ball. Last year more than 600 people attended what has come to be regarded as the computer industry's big night out.

This year the Ball will again be held under the patronage of the British Computer Society, on the eve of the Society's 21st Birthday.

Proceeds will once more be devoted to a charitable cause within the computer industry. So why not help us to help others, and at the same time enjoy a pleasant evening with friends and colleagues.

COMPUTER WEEKLY CHARITY BALL

ORDER FORM

Tickets are available at £12 for a single ticket, included in the price is a dinner, cabaret and dancing until 2 a.m.

Please send me: / Single tickets at £12 per head (after 10 people required)

Please reserve: / (10 places at £12 per head)

My cheque for £..... is attached (Cheque should be made payable to IPC Business Press)

When completed this order form should be returned together with your cheque to Chris Howell, Publishing Director, Computer House, Stamford Street, London SE1 8LG.

Please send the tickets to me at the following address:

NEWS IN BRIEF

Complaint withdrawn

THE shift controller, Mr David Finan, who was taking Northern Gas to the Industrial Tribunal on the grounds of unfair dismissal has withdrawn his complaint, for personal reasons. Mr Finan was sacked (CW, July 13) for pinning biorhythm charts on the Northern Gas computer.

Stamp system

STAMP dealers Stanley Gibbons are using a 96K NCR 1-8250 computer with four VDUs and 20Mbytes of disc store to keep tabs on 50,000 stamps, coins, medals, maps and share certificates which move constantly between four shops, eight security centres, worldwide exhibitions and customers. The £37,000 system will also be used for routine accounting.

Turnkey contract

AUTOMATION for Whitbread's new Major, Gwent, brewery will be provided by Logica under a turnkey contract worth over £250,000. The project is expected to take about nine months. The system is based on a Digital Equipment PDP 11/60, running under Logica's RPMC automation package, and also includes GEC Media data acquisition hardware and Ultrich Intelligent video terminals from West Germany.

Silence schemes

SCHEMES for the leasing and hire purchase of business machine silence covers have been introduced by the Power Equipment Co of Kingsbury Road, London, NW9. The rates start at about £3 a month.

For Finland

THREE hospitals in Finland have acquired X-ray scanners from EMI: two head scanners and one whole-body machine. One head scanner is operating as part of the private health service at a Helsinki hospital, and the other two units are at the universities of Helsinki and Turku.

Basic tutor on Pet

A TUTORIAL program for Basic is available from Commodore for use on the Pet computer. Supplied on a cassette tape for just £5, "Basic Basic" is an interactive tutorial system intended to introduce beginners to Basic programming. It includes fifteen chapters, six sample programs, and "homework" assignments.

TI bubble memory terminal sales soon 'off the shelf'

BECAUSE of the heavy demand for the Texas Instruments bubble memory terminals, the 763 and 765, which were introduced last spring (CW: April 28, 1977), there has been considerable delay in meeting orders in the UK and supplying potential customers with machines for evaluation. In the US terminals have been available for some time for immediate delivery but in the UK no orders have yet been fulfilled.

Now, however, David Monk, UK marketing manager for the European Digital Systems Division, says supplies are coming in and expects to be able to clear out outstanding orders over the next month or so. New customers are likely to have a four to eight week wait, but it is hoped that in about six weeks sales will be virtually off the shelf.

Monk says Texas has received some lucrative contracts worldwide for the terminals and that there is a large number of active prospects in the UK involving several hundred terminals.

The two terminals, the first products on the market to in-

Diana sets up software house in front room

COTTAGE industry computing is on the up and up. A Bradford housewife, Mrs Diana Mackay, has installed £2,000-worth of microprocessors in her front room, modified her television to make it into a display, and set herself up on a software house. Her prospective customers are mainly small businesses needing mailing systems, stock control systems, and payroll packages.

Mrs Mackay's hardware is a SVTP micro system, which is based on the Motorola 6800 processor chip, together with a Midwest Scientific floppy disc drive. She writes all the applications software in Basic, using a disc operating system supplied by Midwest Scientific.

One of her first contracts was for a system to handle a mailing list of 35,000 names and addresses, together with customer data, producing labels on a Centronics printer. Another early product was an information retrieval system that could find any one of 1,000 records stored on the floppy disc within three seconds.

Diana Mackay is 34 and has a five-year-old son and a ten-month-old daughter. She took an MSc in computer science at Bradford University and has worked as a programmer and a systems analyst for various firms in South Africa and London. She has called her firm Microsoft (not to be confused with CAP Microsoft Ltd) and feels there is an ample market for her work.

She asserts that micro is so cheap now that people will not want to pay big maintenance prices for software. "I am confident that the business will come," she says. Her services, she continues, "will particularly benefit the smaller businessman who cannot afford the outlay for a large computer but wants things at his fingertips."

Now, however, David Monk, UK marketing manager for the European Digital Systems Division, says supplies are coming in and expects to be able to clear out outstanding orders over the next month or so. New customers are likely to have a four to eight week wait, but it is hoped that in about six weeks sales will be virtually off the shelf.

Paperback chase

BRITAIN'S thirteen leading paperback publishers have joined together to sponsor a computer-based system for keeping track of paperbacks in print.

The Paperback Stock Control System, to be developed and operated by the Gordon & Gotch Computer Group, will supply publishers with a master card file describing all current titles. It will be updated monthly with additional cards for new titles and a printed report detailing changes to existing titles.

NPL prepares new network plans

By Tim Palmer

WITH its pioneering internal packet-switched network fully loaded, the National Physical Laboratory in Teddington, Middlesex, is considering collaboration with outside organisations to create a new system, possibly based on the International X25 packet-switching standard.

The present NPL network was designed and developed in-house, and made significant contributions to the basic technology of packet-switching. The NPL is considering whether to develop the new one independently, or in collaboration with someone in industry.

Possible collaborators would include Logica, which has experience in packet-switching, GEC Computers, which has shown a growing interest in networking as the Post Office's Experimental Packet Switched Network (EPSS) has progressed, Ferranti, whose Argus 700 computers are used in EPSS, and

Plessey, which has had considerable networking experience, much of it on Digital Equipment minicomputers.

The present NPL network is perhaps best known for the Scrapbook information retrieval system to which it provides access throughout the laboratory. This was developed by NPL on a CTL Modular One minicomputer, and the software is now marketed by Triad Computing Systems, and has been sold to the EEC Commission, where it is running on a Siemens 7.738 mainframe (CW, March 3, 1977).

The NPL network is controlled

by a Honeywell 518 minicomputer with a second on standby, and currently has 30 different machines on it, including almost every model of the Digital Equipment PDP-11 range except the largest.

As well as Scrapbook, the network is extensively used for the NPL-developed Edit Interactive service for laying out text. A facility has been developed to enable broadcast Teletext services to be displayed on a computer terminal, and the network has been used in several pioneering experiments on interconnection of packet networks.

THE first order announced outside the US for an Amdahl 470V/7 supercomputer has come from the Canadian government, which will pay \$4.8 million for the machine. The V/7 is significantly more powerful than IBM's top-of-the-line 3033, and is to be installed in the taxation office of the Department of National Revenue and Excise in the Canadian capital of Ottawa. The first V/7 built is on its way to Western Electric in Illinois, and another will be delivered to American Airlines in Oklahoma shortly (CW, August 3).

Four-day seminar next month

Carl Machover, Bert Herzog, Derrick Grover and Keith Trickett will, with others, present the latest trends and achievements in graphics hardware, software and applications, in the US and the UK, at a four-day seminar staged by Online at the Regent Centre Hotel in London from September 12 to 15. Full details are available from Online, Cleveland Road, Uxbridge, Middlesex. Tel: (0895) 39262.

Here Sydney Poulden reports on the rapidly expanding market.

'Market explosion in graphics has begun'

"THE market explosion in computer graphics, that so many people had hoped for, has now definitely begun."

That is the firm conviction of Carl Machover, one of the leading graphics specialists in the US.

He backs his opinion with figures. "In the last 18 months the market has expanded so that most manufacturers in the field have had over 100 per cent growth in that time. I'm not talking about small companies just getting started. You would expect them to grow rapidly. No, I'm talking of companies that have pushed their graphics turnover from \$16 million to \$35 million. That is significant."

Machover is president of Machover Associates, a graphics consultancy, consulting editor of Computer Display Review and a former president of the Society for Information Display.

To clinch his argument, he points out that IBM has now come to the conclusion that the computer graphics market is big enough to demand its full attention. He points that within the past year, IBM has taken on the marketing of CADAM, a system developed by Lockheed, and in October will be launching a new graphics display console, the 3260.

It is microprocessor technology that is revolutionizing the view of graphics. Lower manufacturing costs, the wider range of applications, demand is therefore increasing, and it is becoming more and more economic for production of graphics equipment in volume.

"Anyone planning new facilities or any manufacturer in the computer field thinking of new products must now consider the graphics field," claims Machover.

It used to require an investment of \$150,000 to get started in graphics in a scientific or engineering computing environment, but it can now be done for \$50,000.

Prices of some equipment are bringing graphics into the scope of the home brew, do-it-yourself computing arena. One graphic tablet on the market permits the amateur to use a scribe to create any kind of design on his own

TV screen at home, in colour, for only \$1,000.

While much progress has been made in hardware, the graphics software experts have not been slack in the US. There have been important moves to rationalise software creation in order to make it more economical to apply packages on different types of equipment.

"The problem with software," explains Bert Herzog, "is that each person in the field has had to keep on reinventing the wheel. Now, we are getting to the point where graphics software will be much more machine-independent and pack-

By Sydney Poulden

ages will be that much more mobile and, consequently, cheaper.

Herzog is director of the University Computing Centre at the University of Colorado, where he is also Professor of Electrical Engineering and Professor of Computer Science. His work on software comes from his appointment as co-chairman of the ACM SIGGRAPH Graphics Standards Planning Committee. The committee has produced a draft proposal for a draft standard.

"We are not a standards organisation, so we cannot draft standards," he says. "But we can make proposals to standards organisations. We have developed standards that could result in huge savings in time and money. If these are accepted internationally, then programs could move easily within a country and across frontiers, independent of the hardware."

Herzog has gained experience in implementing the standards proposals, and will shortly be in the UK to describe his results at the Online seminar.

The new generation of low-

cost graphics units will certainly alter the British market in the near future. According to Keith Trickett, managing director of Competa, the NRDC marketing support subsidiary, Britain can teach the Americans a thing or two in graphics software.

"Because of the shortage of cash for computer power," Trickett points out, "we British have had to use smaller computers more cleverly." He cites several examples of graphics packages with really viable commercial, engineering and scientific applications that have been developed in the UK and are in advance of anything comparable in the US. There is the interactive graphics system ICON, being used for the design of the lattice structure of oil rigs. Gatic, a new system for integrated circuit design, devised by the Wolfson Microelectronics Liaison Unit at Edinburgh University, and a superb example of British software ingenuity in PDMS - the plant design management system.

Dr Keith Pike, one of Trickett's colleagues at Competa, says of PDMS that it is "much more than an automatic pencil for the design of pipeline layout." It allows the designer to construct 3-D representations of every component in a plant, down to the flange and gasket level. All the data is held in store, so that not only can the user access any data, but any data can be accessed and any data level, but data can be collated and accessed for costing and for materials ordering. It is a valuable tool for storing data to be accessed years later, when the plant manager wants to introduce modifications to the layout, or wants to locate sets of components that have to be overhauled or replaced.

Derrick Grover, the NRDC executive with responsibility for licensing and funding graphics projects in the UK, is gathering together Trickett and Pike and others of the calibre of Professor W. S. Elliot of Imperial College to ensure that the graphics programs made in Britain will not be overlooked when the American experts present their findings at the Online seminar in September. "It could," says Grover, "be a case of the tail wagging the dog."

ICL shares climb after good reports

A SECOND stockbrokers' circular strongly recommends clients to buy ICL shares, following an extremely bullish report on the company from Laune, Milbank (CW, July 27). This has helped to push ICL shares through the 360 pence mark and they now stand at their highest point since the company was formed 10 years ago.

A. R. Bowden of Fielding, Newson-Smith, who wrote the latest report on ICL, has been an ent-

husiastic champion of the company for several years, and he told Computer Weekly he believes the company still to be undervalued.

Gerald Kelly, of stockbrokers Rowe Rudd, has few qualms about the shares either. "There is a degree of interest among institutional investors - pension funds, insurance companies, unit trusts - in ICL as a long-term investment," he told Computer Weekly.

No more hitches in Euronet switch

THE problems which have delayed the opening of both the French Transpac and European Euronet packet-switched networks (CW, August 3) lay in the CP-50 switch, developed by Philips subsidiary TRT under sub-contract from SESA of Paris. SESA, the main contractor for Transpac, is building Euronet in partnership with Logica of London.

"The problem has now been solved," a Logica spokesman told Computer Weekly.

"It was a typical sort of problem that one gets at the system integration stage. It occurred when the standby switch took over from the main switch, as would happen when the main switch failed. Instead of shutting down, the failing switch continued to generate data, which corrupted the data in the standby."

The CP-50 switch is built up of three modules, each based on the Intel 8010 single-board microcomputer which is driven by the 8080. The three units are the Group Unit, handling level 3 of the standard X25 interface; the Synchronisation Unit, for HDLC users; and the Asynchronous Line Unit, which handles character terminals.

Several line units can be attached to each group unit, and several group units can be attached to the high speed ring bus through which a minicomputer, in the case of Transpac and Euronet a SEMS Mitra 125, monitors the packet exchange.

This modular and flexible structure makes the CP-50 a particularly powerful device for

packet-switching, probably capable of catering for a greater variation of traffic demands than any other solution currently available.

However, the fact that the Telenet Processor switches, which are also microprocessor-based, can be bought off the shelf and are already installed and working in the US and in London, makes it likely that the Post Office will select these for its forthcoming X25 network if the plan to get it into service late next year goes ahead.

BETA, the Business Equipment Trade Association, has poured cold water on the Post Office's plans for a public packet-switched service. In a submission to the National Committee on Computer Networks, BETA suggests that a packet-switched service would benefit only a minor sector of network users, and calls instead for a basic circuit-switched network on to which packet-switching could be superimposed as a value-added service. BETA also wants moves towards an all-digital (System X) telephone network to be speeded up.

Speaking about Euronet in the Commons last week, Minister of State at the Department of Science, Gordon Oakes, said that the network would involve a pan-European public data transmission service. This has been envisaged as a likely development but not previously stated categorically. Traffic costs on Euronet will be less than £3 an hour.

Queen's Award applications

APPLICATIONS can now be made by companies wishing to be considered for Queen's Awards for Export and Technology 1978. Any UK based firm that feels it has made an outstanding contribution in either exporting or technology may apply.

Several firms in or close to the computer industry won Queen's Awards in 1978 (CW, April 21). Among these were Control Data, Plessey Telecommunications, and Morcon Avionics. British Rail won for export of computer consultancy services. There were 107 Export Awards in total, and 17 Technology Awards.

Closing date for this year's applications is October 31, 1978. Forms can be obtained from The Secretary, National House of Commons, 11/13 Holborn Viaduct, London EC1A 1EL; telephone 01-227 2277.

Something to celebrate at Pompey

WITH Pompey facing the bleak prospect of Fourth Division football in the new season, there is not much to cheer about down on Portsea Island these days. But one Portsmouth company doing a spot of justifiable celebration is Datacourse (Computer Services) Ltd.

This small systems house, which has been in business only since 1976, has won the title of best performing 'Honeywell systems house' for the first time in 1978.

Datacourse built five other companies to the award, the first of its kind, which covered the period January to June 1978.

"It is awarded on the basis of the number of systems sold in the period," a Datacourse spokesman said. "We won it this time by selling more systems during the period."

Datacourse has only been marketing systems based on the Honeywell Level 6 mini, but has offerings right across the power range of the machine, concentrating mainly on the 8/36 and 8/43.

Although it prepared to do turnkey systems, it is also entering two specialist markets: the building and solicitors' practices.

Datacourse started out by doing sub-contract programming work, but decided to enter the systems building market last year. Its first arrangement was with Cincinnati Milacron, but after a couple of months, Cincinnati pulled out of the business.

The award signed up with Honeywell.

The award - half a dozen bottles of champagne and a citation - was presented at a gathering of Level 6 systems builders, and will be awarded next year.

Menzies introduces a new range of products

A CHANGE of name and a new product line features a revitalised effort in the voice business for communications equipment manufacturer Menzies.

Previously called WDC Computers and responsible for marketing the Wavelet voice recording system, Menzies Communications Systems Ltd. is introducing a new range of products in the UK, which come from the company's new subsidiary, Menzies and Smith.

The Wavelet agency was promptly snapped up by Raelco, which now has a marketing rights for Wavelet products throughout Europe (CW, July 13). WDC installed Wavelet systems with a number of large companies, notably Palmolive and Smiley.

Paraphrasing systems have been installed at 250 US sites.

Hobbyists in London form a club

A NEW hobby computer club is to hold its inaugural meeting in October with the backing of the Department of Electronics and Communications Engineering of the Polytechnic of North London.

Calling itself the North London Hobby Computer Club, it will open to all comers in the North London area. The opening meeting will be on October 6, 6.30 pm, in Room 47 in the Polytechnic Building at Holloway Road, opposite Holloway Road station.

One of the special prizes in the Dataskill/Computer Weekly essay competition, Computerstyle 2000, was awarded to Anthony Thornton, of Derby, who works for British Rail. His winning essay appears below. In it he describes the projected lifestyle of one Jo Bradley who, having reached the

age of 55, is to start a four-and-a-half day week, then four, three, ultimately retiring from economically active life at the age of 60.

The essay of the remaining special award winner, Paul Holden, of Dublin, will be published shortly.

'What would my Granny have made of all this.....'

computers waking me up, taking my orders for breakfast, supervising preparation of same.....?

By ANTHONY THORNTON

"BRRR!" Silence. "Brrr!" Silence.

Jo Bradley opens his eyes, yawns and halts the snoring ring of the alarm with a spoken command. It is Monday morning, Monday April 23, Year 2000, 11.00am, to be precise. Jo Bradley is reminded of these facts by the date/time display situated on the wall opposite. Turning to face the microphone by his bed head, he speaks deliberately.

"Break-fast-Em-Threec."

"Accept," responds an anonymous monotone voice.

Jo turns back and smiles as he visualises the house computer directing the automatic handling device downstairs; the latter slowly traversing the rocks in the kitchen until the pre-packed breakfast M3 is located, now transferring the aluminium container and retracing its path before gently placing the breakfast in the processor-controlled oven.

"What would my old granny have made of all this?" thought Jo.

"Computers waking me up, taking my orders for breakfast and supervising preparation of the same."

"You lucky creature!" he says aloud to his wife as she gets out of bed.

First in the bathroom, Jo decides to make use of his latest acquisition - a physical condition tester. He'd been pleased to add this capability to his house computer some weeks earlier. After all, he was in his 54th year and wasn't it a perk of his thriving business - ailing, in-stalling and maintaining personal computer systems - to reap the benefits of the latest hardware on the market?

"I'm not feeling quite 100%" he muses. Monday morning's never change.

Jo unhooked a speaker from the gleaming plastic cabinet. "Jo Bradley," he mouths, in the same tones he had used when ordering breakfast. A stored message flashed across the now illuminated visual display unit, prompting Jo to provide hair, blood, urine, and exhaled air samples to the appropriate receptacle. Some minutes pass, while the results of analysis are digitised and communicated along with Jo's pressure, weight, blood pressure and pulse rate to his personal computerised medical record. One day, perhaps soon, perhaps later, this information

Jo notices the print-out, which his wife is perusing. "You shouldn't be reading my diary," he scolds, regretting the moment of passion when he had divulged the password which granted access to his personal information. One day, he swore, he'd switch over to the finger-print matching security system, like that fitted to the locks on the doors of the house.

Bending over his wife's shoulder, he scans his day's appointments. Just two straightforward installation jobs, left over from the weekend. Being Monday, there would be many more in addition to these on the files at his shop.

Everyone, in theory, could send business messages direct to his home, but Jo would only allow this facility to special friends and insisted on separating work and leisure. For Jo, home was leisure.

"Goat you and 'als' a birthday page?" Jo asks, noticing the relevant entry on the print-out. "One of those you made yourself."

With a fond farewell, Jo departs, leaving Jan to scan her small selection of greeting pages. Soon she hears the VDU

beeping pace this morning," thinks Jan, "best get started about the house... Andy!"

The small robot skulking in the corner of the kitchen near the electric socket, stops whatever it is doing and follows Jan into the lounge. Together they set about a variety of domestic chores - cleaning, bed making, washing, pressing and the like. Many younger women specified the day's tasks to Andy-like robots and left them to it. Jan had always found this process time consuming and preferred a co-operative effort. Besides, with an untidy husband like hers, Jan had found Andy's early attempts to discriminate refuse from valued articles quite disastrous.

Chorea completa, Jan has the rest of the day to herself.

What to do? Repulsive smell of food. No warnings from the house computer, leaves it until later in the week. Spray weed killer on the lawn. Andy can do that. Reset the decor on the lounge wall. I quite like our present lighting pattern. Design some more dresses. Manipulating the light pen gets so tiring. Play 'scrabble' with the computer. Not today thank you. Visit Mary.

Join the meantime is enjoying his drive to work. Having previously kayaked his destination, his shop, into the car's trans-

mission. The system currently includes a real time executive, a development and documentation methodology, and optional extensions to the official Coral 68 standard. Highly regarded by those who have used it, it is said to offer major advantages throughout the software design.

It is the middle of the afternoon before Jo is nearing completion of the second installation of the day - a microprocessor control system for his friends' greenhouse. Testing the system is somewhat amusing. Windows opening and closing as Josh feels the sunlight from first one, then

the Bradleya turn their attention to the menu in front of them. It does not take long to make their choice and transmit it to the restaurant. They often dine out these days, finding it both cheap and efficient compared to some years previously.

They prepare to follow hard on the heels of this last message. It is Tuesday morning, Tuesday, April 24, year 2000, 11.00am, when two tired but contented souls climb into bed. Jo turns to the microphone by his bed alarm.

"Alarm, eight am," he commands drowsily. "Better make it 7.45," says Jan. Nudge nudge, wink wink!

Provided we have dinner at the club, afterwards," came the hargaining reply. Jo does not need second bidding where squish is concerned. He is through to the club's reservation system in a matter of seconds, just pre-empting his friend with the greenhouse, although he does not know it. Court and dinner table reserved.

Many younger women specified the day's tasks to Andy-like robots and left them to it. Jan had always found this process time consuming and preferred a co-operative effort.

Jo is a little surprised to see Jo home early. "What did you do today?" he asks. "I walked to Mary's," and back, Jan looks pleased with herself, her normally pallid complexion showing the welcome benefits of fresh air and exercise.

"Oh very busy dear," responds Jo, in a sardonic tone, "that's why I'm back early."

They settle to a light tea in front of TV in the lounge. One of those electronic mail-order sales programmes, which are so popular nowadays, is in progress. Jan is beginning to show interest in the clothes being modelled, and so Jo, when a message, via telephone line and home computer terminal, appears on the lower part of the screen. Only messages from sources to whom Jo has assigned priority will effect such an interruption.

Mascot as standards?

From front page obliged to adopt it. A consultative document describing the new proposal is due to be published in a few weeks, according to informed sources.

Mascot (Modular Approach to Software Construction Operation and Test) was originally developed as an aid to applications development based on an Algor 68 environment. It was subsequently adapted to suit the UK standard for real time work, Coral 66, with the assistance of Systara Designers (CW, November 17, 1977).

The system currently includes a real time executive, a development and documentation methodology, and optional extensions to the official Coral 68 standard. Highly regarded by those who have used it, it is said to offer major advantages throughout the software design.

Implementation, and maintenance cycle. The Mascot Suppliers Association, an informal grouping of those interested in or experienced with the system, already includes Systems Designers, Software Scientists, Consultants, and Logica and Marconi as hardware suppliers.

An indication that more widespread use of the system is anticipated was provided by a lunch given in London last week by Infotech International, intended to launch a two-day Infotech tutorial on Mascot scheduled for October, the meeting was attended by senior representatives from the Mascot Suppliers Association and from existing and potential users, including the British Aerospace Corporation and GEC Computers.

The small robot skulking in the corner of the kitchen stops whatever it is doing.

OPERATIONS

NO NIGHT OR WEEKEND SHIFTS!

London W.1

SHIFT LEADER

c. £4150

To work on ICL 2980, with extensive real-time and communications systems. Requirements are at least two years' operating ON ANY HARDWARE including miniframe operating system knowledge, 4 'O' levels, aged over 21 and with some leadership experience.

MAINFRAME OPERATORS

Up to £3700

To work on initially ICL 1900. You should have at least 4 'O' levels, be over 21, and have held at least one operating post on ANY MAINFRAME.

MINI OPERATOR

Up to £3700

To be responsible for a minicomputer in a user department, linked to a mainframe. You should have had practical operating experience (on any mini or mainframe), be over 21, and have at least 4 'O' levels.

DEPUTY SUPERVISOR (Data Control)

Up to £3600

Requirements are at least two years' data control/job control experience and some supervisory ability. You should be over 21 and have attained 'O' level education.

We are recruiting for clients, a major West End installation. Hardware is ICL 2980 and ICL 1900, plus minicomputers. A two-shift system is in operation, from Mondays to Fridays. Due to expansion, career prospects are good.

If you want to work more congenial hours, ring us for a confidential talk, quoting ref AEN/CW, or leave a message on our answering machine after hours and we'll contact you.

Tel: 01-637 5796

EDP Systems Limited

52-53 Margaret Street London W1N 7FF

FREELANCERS

We are a growing consultancy with an immediate requirement for freelance programmers with knowledge of the following:

COBOL, Assembler, DOS/VS, CICS/VS — Knowledge of Securities an advantage, also knowledge of German helpful but not essential. We have an on-going requirement for

ON-LINE Programmers with knowledge of Taskmaster, IMS, TCAM, ADABAS, TOTAL.

Contracts of varying lengths — minimum 3 months — in Switzerland or Germany. Excellent salary offered to the right people.

Interested? Good Enough? Send your Curriculum Vitae to BALAGLOW LTD., Box No. 1972, Computer Weekly, Dorset House, Stamford St., London, SE1 8LU, as soon as possible, including availability for commencement of contract.

ANALYSTS FOR SYSTEM/34

We are looking for motivated individuals with a minimum of 3 years' experience in working on SYSTEM/34 applications.

A background in smaller commercial companies would be useful, but more important is the ability to communicate with clients' management and develop sound, practical systems.

We have been established as a software house specialising in commercial applications for over 5 years.

We installed our own System/34 in June, and training on the advanced facilities of this equipment is therefore available in-house.

Why not ring Bill Thorpe or Gordon Brownhill for a chat about career opportunities in this exciting and varied environment?

SALARY RANGE £5,000-£8,000
(initially rising experience)
plus car allowance and mileage allowance

Apply to:

G. H. Brownhill Limited
(Gordon Brownhill Computer Services)
Beech House, Holt Way Lane
Cobham, Surrey, Surrey, Surrey
Tel: Cobham (0252-78) 4111

ENJOY THE FRUITS OF SUCCESS IN OUR GROWTH ENVIRONMENT

Between Asda's 66 Superstores, our major U.K. dairy company and our meat manufacturing operation, our Groups turnover has consistently grown from £85m in 1972 to £429m in 1977.

The growth of the computer installation has been equally dramatic. Now we are involved in database and data communications for many diverse applications on our dual Honeywell 86/20.

For the future the Group's operation will continue to provide challenging opportunities for ambitious Analysts and Programmers. It's just the right time for you to develop your skills with positive goals to aim for, if you fit the jobs described below:

SYSTEMS ANALYSTS — to £5,700

This position will give you a significant degree of business involvement using all the latest techniques in hardware and software. If you have at least 12 months systems experience, extend your career with us where you will have full responsibility for initiation of systems and all stages to full implementation.

PROGRAMMERS — to £5,400

Your fluency in Cobol, coupled with intensive in-house education into Honeywell will open up a diverse range of applications incorporating Database (IDS) and communications (TDS). At least 12 months previous experience is required for these positions.

TECHNICAL SUPPORT PROGRAMMER — to £5,700

Your major function will be to install, maintain and monitor our software; it is essential, therefore, that you have proficiency in a low level language (preferably GMAP) and ideally experience of an advanced operating system.

Right from the start we'll offer you an attractive remuneration package, including re-location to this area on the fringe of the Yorkshire Dales abounding in low-cost property. Please send us a full c.v. stating your claim to an early interview to:

Mr P.R. Bygate
Personnel Manager
Associated Dairies Limited
Craven House, Kirkstall Road,
Leeds LS3 1JE.

SDI INTERNATIONAL SUPPORT CENTRE OPERATORS . . . DO YOU PREFER TO

DO IT

DURING THE DAY RATHER THAN AT NIGHT?

The SDI Support Centre is moving to a new computer suite situated in the New Kings Road, Fulham.

This move, combined with an internal promotion, has created the following vacancy:

SENIOR OPERATOR — Day Shift only c. £4,500

Responsibilities will include:

- ★ Supervision of operations staff
- ★ Training of junior operators
- ★ Computer time scheduling
- ★ Supervision of computer and computer room maintenance

Ideally, the successful applicant will have proven supervisory ability, with a minimum of two years' IBM operating experience, preferably using DOS or DOS/VS and/or GRASP (VS).

For more information ring John Broughton on 01-736 8184 or write to him at:

SDI
124 New Kings Road, London SW6 4ND.

SALES TRAINEES

CENTRAL LONDON U.S. Bureau 1st Year Min. £5000

This rapidly expanding time-sharing bureau is seeking sales trainees to augment a busy sales team in their City office. The Company market a range of powerful software products in the financial modelling, corporate planning and marketing analysis fields.

Successful applicants will receive an excellent training in both the Company's products and sales technique. Training will extend over the first six months with Trainees moving into an active role during the second half of the year. Sales Executives with the Company are currently earning salaries in excess of £10,000 per annum.

Applicants should have a minimum of 2 years' commercial experience, gained in either a O.P., Accountancy or Marketing organisation. Educational background and communication skills will be major contributory factors, together with the desire to join a fast growing American Company with turnover over £150 million.

Ref. W1/1008

18 MONTHS' COBOL?

On-Line Real-Time Projects

BUCKS

To £5250

This busy engineering company is currently developing several on-line real-time applications on IBM hardware. Vacancies now exist for Programming staff with a minimum of 18 months' COBOL, gained on any hardware, to join a Project Team developing programs to run with IMS and DC/DB software.

The company offers an excellent training programme together with real opportunities of progression to Analyst/Programmer and Team Leading roles.

Terms and conditions of employment are outstanding and include relocation assistance and five weeks' holiday per year.

Ref. W2/1008

2 YEARS ANY COBOL PROGRAMMERS

SURREY

TOTAL TO £6500

Our client is eager to recruit additional Programmers in order to release several projects awaiting development. Centred on large IBM mainframes operating under OS, the D.P. department is ready to expand its database systems to encompass the new applications.

Programmers will undergo an extensive training scheme involving languages, database techniques and teleprocessing.

Applicants should offer at least 2 years' experience (18 months with relevant degree) in COBOL on ANY MACHINE, or IBM ASSEMBLER.

The Company's modern, air conditioned data centre is set in the attractive countryside of Surrey and offers successful candidates an excellent opportunity to advance their careers within a progressive environment. Generous relocation expenses are available and the total benefits package is financially very rewarding.

Ref. S2/1008

PROGRAMMERS

IBM HARDWARE — TRAINING GIVEN

To £6000

CHELMSFORD AREA

We are seeking experienced Programmers for our client, whose modern offices are conveniently situated in the Chelmsford area of Essex.

The installation comprises IBM mainframes which support a large teleprocessing network. The company is currently expanding and developing this service and where necessary successful applicants will receive full training before joining project teams.

To qualify in the first instance for one of these positions you should have a minimum of one year's programming experience, Assembler or a high level language, gained on any manufacturer's hardware. You should be keen to work in a stimulating and progressive environment where you will be rewarded for effort.

SYSTEM SUPPORT PROGRAMMERS

(Posts C180 and C213) £4245 to £8073

(Readvertisement — previous applicants need not apply)

The successful applicants will join a team responsible for the operating system, development of systems support software, and dealing with investigation into a replacement for the present installation (ICL 1904S (265K) with extensive communications facilities).

It is expected that the applicants will have a relevant University Degree together with at least one year's post graduate experience in an ICL 1900 GEORGE 3 installation and have a working knowledge of COBOL, FORTRAN and PLAN.

Contributions towards removal and disturbance expenses will be payable in accordance with the Council's Scheme.

Requests for application forms stating post number to County Treasurer (Ref. RPE), Suffolk County Council, Milner House, Rope Walk, Ipswich, Closing date for completed application forms 31st August, 1978.

SAFE
COMPUTING LIMITED

2960 Shift Manager

West Bromwich

£5,000 - £6,000
+ Shift Allowance

As part of our expansion policy we are installing an ICL 2980 in new office premises at West Bromwich in September this year, which will offer our Customers a batch and remote service.

In order to strengthen our Operations Team we require a person with at least six months' practical 2900 series experience, who is seeking further responsibilities.

The position will initially control, on a shift basis, a Shift Leader, two Operators, and a Data Controller; Development and Training will be encouraged to enable the job holder to enhance his responsibilities in other ancillary areas, e.g.: dump cranking, S.C.L.

In addition to a salary within the above range the usual terms and benefits of a large Company will apply. Please write in the first instance giving details of age, qualifications, and experience to:

J. A. Thomas
Computer Operations Manager
Safe Computing Ltd.
Wednesfield Road
Wolverhampton

F INTERNATIONAL LIMITED SYSTEMS ANALYSTS PROGRAMMERS

Continuing our period of planned expansion we would be pleased to meet Systems Analysts and Programmers with a minimum of 4 years' experience interested in either part-time, home based or full-time opportunities within one of the country's leading software houses.

Come and meet us for informal discussion on Wednesday, August 23rd, between 10.15 and 2.15 hours at the Hotel Leatrice, Broadgate, COVENTRY or Holiday Inn, St. Nicholas Circle, LEICESTER.

If you are unable to come along then or are interested in opportunities in other parts of the country, please contact the Personnel Office, F International Limited, The Barry, Church Street, Chesham, Buckinghamshire HP8 1LB (Tel: Chesham (02968) 4999) for detailed literature.

RPGII/ASSEMBLER EXPERTISE

LONDON/SURREY £5000-£7000 + +

Our client offers a genuine consultancy service mainly to first-time users who wish to establish a small data processing department to streamline accountancy procedures and introduce modern Stock-Control techniques.

Applicants should be conversant with RPGII or Assembler, gained on small computers (IBM SYSTEM 3 or 32; ICL 2903 or SYSTEM 10) and possess system design experience. A knowledge of financial systems and/or on-line techniques will be an advantage.

These positions offer a great degree of responsibility and all employees are encouraged to develop their careers as data processing financial consultants.

JUNIOR CONSULTANTS will join small project teams to gain experience installing total systems and solving clients' problems. They will receive formal training in communications and business procedures.

SENIOR CONSULTANTS will lead project teams and provide technical support to the sales force. They will be responsible for meeting targets and ensuring complete client satisfaction at all stages.

The Company comprises young and enthusiastic professionals who are seeking to build on the high reputation they have already created in a very competitive market.

ANALYSTS & PROGRAMMERS

WHY LEAVE YOUR PRESENT JOB to come and work for a friendly, highly professional, rapidly expanding Software House based in Oxford Street?

YOUR SALARY'S EXCELLENT but there again, we're offering up to £7K for Analysts and £8K for Programmers.

YOUR JOB IS VARIED AND EXCITING Kidding yourself? We're offering a wide variety of projects on IBM 370's (OS/VS) and Honeywell 68/64/82's which could make your life a little livelier.

YOUR PROSPECTS ARE STUNNING but our rather unusual growth rate might just make your future a little brighter.

Tempted? Give Gary Jones a ring and he'll tell you the rest.

DATA BASE ADMINISTRATOR

S. London / Surrey
to £8,500

01-686 9693 (24 HOUR ANSWERPHONE)
19, PARK STREET, CROYDON, CR9 1TN

Candidates might currently be data base administrators or those with significant data base design experience wishing to broaden their involvement. As this is a new post there will be considerable flexibility of operations. The successful applicant will be responsible for data base design and management as well as acting as a consultant to the department as a whole.

Our client is a major and well respected financial organisation already successfully utilising advanced IBM hardware/software. Currently major expansion plans, which include the creation of this post, are under way. Significant on-line and data base projects are to be implemented.

The position is to be a key post of a small, highly competent team responsible directly to the Technical Director. Applicants should have in-depth DBMF knowledge, be self-motivated, and have a professional and innovative outlook.

This is an opportunity for someone who previously has felt his ideas rather stifled to be in on the ground floor of a new development. Starting salary will be negotiable to £8,500, dependent on experience and benefits include four weeks' holiday, non-contributory pension, LVA and flex-time.

To find out more about this position, telephone our CROYDON OFFICE quoting REF. CW30-BH, or write enclosing brief details of experience and expectations.

JBA

Junior Consultants

Berks/USA/Europe
Opportunities have arisen in the European Systems team of this major American company for Analysts/Programmers to join its Project Consultants. They will provide support and advice on commercial projects of all kinds to installations throughout the UK and Europe, and applicants should therefore have a good grounding in commercial applications, preferably with a strong IBM bias. These vacancies have occurred through internal promotions to more senior levels indicating that career prospects are definitely good for able candidates. An ideal opportunity to gain experience of Project Management of Consultancy level. Travel to the USA and Europe, supported by generous tax-free allowances, will play a major part of the job. Contact: Andy Wright

Analyst/Programmers

London up to £6,000
Our client, an international computer services organisation has opportunities for staff to join project teams developing commercial systems. Applicants should have a minimum of two years of programming in COBOL, PL/I or RPG2 in a commercial applications environment and have been involved in the design of at least one system. Knowledge of terminal and real-time working would be an advantage. Career prospects to project leader are excellent. Salary according to experience. Large company benefits with chance to travel. Contact: Mike Creamer

HOLLAND

Programming Team up to £12,500

We have been retained to recruit a team of IBM370 OS/VS experienced programmers with a very sound COBOL background and complete familiarity with JCL. The group will comprise a team leader, three junior analysts or Senior programmers, and several junior programmers (with/without 18 months experience). The project applications area will include factory systems, material management, stock control, purchasing and work in progress. Ideal commencement date will be early October and interviews will be held during August in the UK and Holland. Lovely opportunity to experience living and working in Holland whilst earning good salaries. Contact: Mike Creamer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
16 Maddox Street, London W1. Tel: 01-491 4478

Systems Analysts

London W1 £5,500-£7,500
A major British engineering and construction company has retained JBA to recruit Systems Analysts to strengthen their financial systems team. All applicants must have worked on financial systems, and for the Senior positions, a minimum of four years relevant experience is expected. The less senior vacancies would commence at salary levels of c. £5,500. Analyst/Programmers looking for a move into full systems analysis should have a minimum of three years D.P. experience. Good salaries and working conditions, plus the attraction of being part of a dynamic environment. Contact: Andy Wright

Process Control

Bracknell up to £6,000
A small development group has been established in Bracknell by an international engineering organisation to continue their expansion of the industrial systems market. They have immediate opportunities for mini-computer programmers and specialists to work at all levels on these projects. Applicants must have at least two years experience in industrial or process control applications using mini-computers. A sound background of FORTRAN, COBOL, RPL or Assembler is essential. Excellent salaries, relocation expenses and the opportunity for commissioning work in various parts of the world. Contact: Andy Wright

HOLLAND

CAD/CAM Consultant Salary & terms negotiable

This senior position will suit a specialist in computer aided design/management wishing to apply his/her experience and knowledge in a consultancy role. The particular skills required are in the areas of interactive graphics applications, numerical control system design, part production systems and design analysis. Dealing with potential customers and assisting the sales and support teams will be the essential part of the job, as well as advising the programming and design teams. The successful candidate will have a proven track record in CAD/CAM type development and sales, be a highly personable and presentable individual with a willingness to travel and deal with people at all levels. European language ability an obvious bonus. Attractive senior staff position offering tremendous scope for creativity, job satisfaction and career development. Contact: Mike Creamer

BORG-WARNER LIMITED TRANSMISSION DIVISION

BUSINESS SYSTEMS ANALYST

Borg-Warner Limited, Europe's leading independent manufacturer of automatic transmissions, have a vacancy for a Business Systems Analyst within their Finance Department, located at Letchworth in the pleasant countryside of North Hertfordshire.

Computing - Apply Your Skills to Air Safety Research

The Royal Air Force Institute of Aviation Medicine at Farnborough is responsible for research into the human factors which determine the efficiency and safety of all who fly. Its work is of vital importance both to the RAF and to civil aviation. The computing section provides full support to the experimental programmes.

Systems Software Analyst

The successful candidate will be responsible for the development and maintenance of the systems software for a medium size multi function complex. The central system is connected to the high speed hybrid subsystem and to other general and special purpose devices operating over high speed

private lines. Candidates may occasionally be involved in applications programming in FORTRAN and should have some experience of programming in a high level language. Suitable operating system training can be provided by the manufacturers.

Computer Programmer

The programmer appointed will join a team providing the Institute with high level programming support for a variety of problems associated with physiological and psychological research. Programmes are usually written in FORTRAN. Training in more advanced techniques can be given. Candidates should have a Degree/OND/HNC in an appropriate discipline and should be conversant with operating system principles. Appointment as Higher Scientific Officer (L4100)

(L5450) or Scientific Officer (L2840-L4410) according to qualifications and experience. Promotion prospects. Non-contributory pension scheme. For further details and application form (to be returned by 25 August 1978) write to Ministry of Defence, C&I(S)R3, Room 310, Savoy Hill House, Savoy Hill, Strand, London, WC2R 0BX. Computer Operators

We talk your language.

George 3 or OS/VS1 - Salary range £4,000-£4,400 p.a. with valuable extra benefits.

When it comes to job satisfaction, it's worth talking to London Transport, the world's largest urban transport system. At our rapidly expanding Data Processing Department in Central London, we're looking for more experienced staff with at least an 18-month background in George 3 or OS/VS1 operation.

As well as a salary in the range of £4,000-£4,400 p.a., we can also offer other benefits:

- * FREE TRAVEL on London Transport services at all times.
- * Good holidays.
- * Subsidised staff restaurant.
- * Pension Scheme
- * Excellent sports facilities

You will also be given excellent training with good promotional prospects.

The installation currently comprises 2 ICL 1904s, 2 ICL 2904s, IBM 370/148 and IBM Series 1 computers, handling Batch Processing, Transaction Processing, Interactive Processing and On-Line Enquiry systems.

So if you have the experience and ability we're looking for, telephone the Senior Operations Controller now, on 01-837 9144, or write to The Staff Appointments and Development Officer, 55 Broadway, London SW1H 0BD, quoting reference 815/C.

AMERICAN EXPRESS INTERNATIONAL BANKING GROUP

We are in the process of expanding our computerisation programme in the U.K. and now seek to fill two key positions to strengthen the mechanisation project team. Suitably qualified applicants are invited to apply for the following positions:

SYSTEMS ANALYST

The ideal candidate will have a minimum of 2-3 years' experience of systems analysis and design. This must include the implementation of at least one significant computer system. While programming experience would be an advantage, an O&M background, preferably in banking, is essential. The position will report directly to the Systems Manager and should afford opportunity to progress towards becoming an all-round system designer of high quality.

COMPUTER PROGRAMMER

The ideal candidate will have at least 2-3 years' programming experience, implementation of COBOL, PL/I, etc. Major duties include new program development and live system support. The successful candidate will be required to demonstrate a high level of proficiency in the diagnosis and repair of computer systems.

Both positions carry excellent salaries and fringe benefits are in line with those normally associated with the International Banking sector.

Applicants should apply, in writing, to: Mr. A. J. Reynolds, Deputy Personnel Manager, U.K. Region, 675/700 Moorgate, London EC2P 2JY.

Wrangler

SYSTEMS ANALYST/PROGRAMMER

Wrangler, one of the world's leading manufacturers of leisure vehicles, is looking for an enthusiastic professional who has at least 1-2 years' systems and programming experience in a commercial environment. You must have a knowledge of COBOL or PL/I and any experience of online systems would be a plus.

You will join a small EOP team in our Head Office and Distribution Centre in Devon and have the opportunity to become involved in the activities of the site. The Company is an ISO 9000 registered and knowledge of this standard would be useful. If you are interested in this position, please telephone or write to the Recruitment Team to:

Mr. Alan J. Giddens, Recruitment Manager, BLUE BELL APPAREL LIMITED, Calverton, Nottingham.

ABERDEEN
ROBERT GORDON'S
INSTITUTE OF
TECHNOLOGY

SCHOOL OF ELECTRONIC AND ELECTRICAL ENGINEERING

RESEARCH ASSISTANT

A Research Assistant is required to join an SRC supported Research Project concerned with the application of digital stochastic computing techniques in on-line control and simulation. Applicants should be honours graduates in Mathematics and Statistics or Computer Science or Electrical Engineering.

Three year fixed term contract. Salary range £4,056-£4,311, £4,578 per annum. Application forms are available from and should be returned as soon as possible to the:

Chief Administrative Officer, Robert Gordon's Institute of Technology, Schoolhill, ABERDEEN, AB9 1FR.

UNIVERSITY OF NEWCASTLE UPON TYNE**POSTGRADUATE DIPLOMA IN MULTIMEDIA COMPUTER SYSTEMS PROGRAMMER/PROGRAMMING ADVISER**

Students are invited to join a team of programmers working with IBM 370/148 and 360/87 computers. Development of both standard IBM operating systems and the Michigan Terminal System is being undertaken. Opportunities exist to work on the internal of these systems or to implement and advise on applications packages. Applicants should have a good knowledge of IBM systems and an understanding of the needs of a community of research workers.

The appointment will be made on one of the following scales according to age, qualifications and experience: Range 1A £5,600-£6,175 or Range 1B £3,700-£4,300 per annum. Membership of the appropriate University superannuation scheme will be required.

Further particulars may be obtained from the Registrar, The University, 6 Kingston Terrace, Newcastle upon Tyne, NE1 7PU, with whom applications should be sent together with the names and addresses of three referees. Should be lodged not later than 20th August, 1978. Please quote reference 200/1.

SUN LIFE
OF CANADA
COBOL PROGRAMMER
SALARY: Up to £6,000 p.a.

We are looking for a programmer with a minimum of eight years' COBOL experience. IBM 360-370 background is an advantage. The successful applicant would participate in project work and have the opportunity to be trained in Analysis. We offer generous fringe benefits including a subsidised staff mortgage scheme, free lunches and flexible hours.

If you are interested please phone me on 830 5400 ext. 223, or write to me at the following address:

PENNINE DIVISION

CHIEF TECHNICAL ASSISTANT (SYSTEMS)

Salary: £4,821-£6,181 (+ £312 pa supplement)

Based at Middleton, Lancs., you will be responsible to the assistant divisional finance officer (technical) for supervising the day-to-day operation of the data processing section of the division.

You will liaise with head office computer services staff on the implementation and development of financial and non-financial systems.

You should have appropriate educational qualifications and either a programming, systems or computer operations background.

Application forms and further details from: The Personnel Officer, North West Water, Pennine Division, London House, Oldham Road, Middleton, Manchester M14 1SD. Closing date for applications: 28th August, 1978.

The above post is open to men and women.

MANAGER COMPUTER SERVICES

Post Number F5/83
£7418-£8183

Applications are invited from persons who have considerable experience in the use of computers, particularly IBM, and have experience in all aspects of data processing. The person appointed will be responsible for the management of the computer division of the City Treasury, and will be chief adviser on the use of computers to meet the City Council's information needs.

Southampton is ideally situated close to the South Coast resorts and the New Forest; it has impressive sporting and leisure facilities, and a fine shopping centre.

- Employment benefits include:-
- Pleasant working conditions
 - Flexible working hours
 - Subsidised canteen
 - Staff social club

Consideration will be given to the provision of housing accommodation in certain circumstances. Up to £500 towards removal and resettlement expenses plus a temporary lodging allowance of £10 per week may be available.

Application forms and a job description available from the City Treasurer, Civic Centre, Southampton SO9 4XD. Telephone Southampton 23888, ext. 616.

Closing date: 30th August.

MYRIAD

WHAT WILL YOU ACHIEVE BY CHRISTMAS?

SENIOR SYSTEMS ANALYST

North West London

c £6500

Our client is a fast growing company with multiple retail outlets and a centralised warehousing complex. The extensive use of computerised systems has enabled growth to take place in a controlled and planned manner.

A vacancy now exists for a Senior Analyst with two or more years' experience in a stock control environment who would welcome the responsibility of installing a high street retail stock replenishment system, the first phase of which should be implemented by Christmas.

The system will encompass:-

- * OMR DATA CAPTURE
- * DATA TRANSMISSION
- * INTELLIGENT TERMINALS
- * LARGE MAINFRAME/MINI INTERFACE

Applicants should have experience of successful project implementation and will join an installation where hard work and endeavour are recognised and rewarded. The company also offer a contributory pension scheme, luncheon vouchers and staff discount scheme.

DATA PROCESSING MANAGER

Up to £7,000 & car
Atherton

TI Bainbridge Silencers Ltd., is a member of the successful Tube Investments Group employing over 800 people and with a turnover exceeding £20m. It is the largest manufacturer and distributor of replacement vehicle exhausts in the UK with seventeen depots extending from Devon to Scotland.

This is an important and challenging new post in which the successful candidate, located near Bolton, will accept responsibility for developing existing systems and introducing new applications.

He/she will have three subordinate staff. The two major facets of the job will be the co-ordination of the internal system with the TI Central Computer Unit, and the introduction of mini-computers into the depot network.

Applicants should hold a relevant degree or equivalent qualification supported by sound basic DP experience and have had at least three years in the management of multi-site computer installations, preferably in the distribution business. Practical knowledge of control procedures and management information systems is essential.

Anyone under 30 years of age is unlikely to have the necessary experience to successfully undertake the duties of this post.

Conditions of employment are first class and include pension scheme, free life assurance and discount on all TI Group products.

For an informal discussion telephone 0204 71651 or please write with brief career details to:

E. Adamson, TI Bainbridge Silencers Ltd., Booth Road, Little Lever, Nr. Bolton, Lanes.

Systems Support Engineers

High salary and excellent prospects in Germany

ITEL is one of the world's largest suppliers of IBM-compatible mainframes, marketing and maintaining a wide range of products throughout the United States and Europe.

As a result of continuing expansion, we are now seeking two Systems Support Engineers for our German operation - one to be based in Munich (who should speak German fluently) and the other to be based in Stuttgart (where German, though desirable, is not essential). ITEL will help those who wish to learn German by providing assistance with both the time and cost of tuition.

These positions involve a wide range of responsibilities including the provision of advice and guidance to ITEL customers regarding new operating system releases, new hardware announcements, and changes in hardware configurations. Planning and sales support will supplement debugging and general areas of system engineering.

The work is varied and in addition there is no risk of losing contact with the rapid advances being made in computer technology - ITEL ensures that all its staff are kept up to date with the latest developments by providing training facilities for that purpose.

Candidates should have experience with IBM large systems, 370/158 and upwards, plus a good knowledge of Intrinsics. Knowledge of MVS, SVS, VM or DOS/VS is desirable.

Salary and benefits are generous - ITEL can offer you a great deal. Why not give us a call, you've nothing to lose.

Send a C.V. or make a reverse charge telephone call in confidence to Chris Worral - ITEL Deutschland Informations - Systems GmbH, Euro-Haus, Lyonerstrasse, 26, 6000 Frankfurt/Main, West Germany. Tel: (619) 56891.

CONSULTANT DAMIAN HANDSLIP

ANALYSTS, ANALYST/PROGRAMMERS**LONDON TO £8500**

These attractive positions are for candidates with at least 3 years Data Processing experience interested in working as Support Consultants for a major international manufacturer. Duties will include assisting both in post sales conversion exercises throughout the London and Home Counties region, and for senior staff, occasional pie sales feasibility studies. A working knowledge of COBOL programming on any machine will be advantageous. Full product training will be given, with the opportunity to work on futuristic Real Time and Database projects occasionally. Excellent career prospects exist with early progression based on results. The positions will be based in West London.

CONSULTANT DON PHILP

PROGRAMMERS --**SCIENTIFIC SUSSEX TO £5250**

Programmers are responsible for the design and programming of Engineering/Simulation applications using low level and high level languages. Simulators are controlled by PDP 11/45 mini computers operating in Real Time. A minimum of 1 year's Assembler experience in a scientific environment is sought.

CONSULTANT CAROL PROUDMAN

PROGRAMMING MANAGER**NOTTS c £5500**

Preference will be for candidates with at least 5 years' programming experience, preferably with significant knowledge of the IBM 370 range working under OS, VS and UMS. PL/I, DL/I and 3790 are utilized. The unit uses dual processor Data 100 RJE terminal with data validation and data preparation facilities connected to a centralized Birmingham mainframe. The successful candidate will take control of a team of 8 staff, due to expand to 12, and will provide user services both for new applications and maintenance of existing facilities. The post will report directly to the Data Processing Manager.

CONSULTANT DON PHILP

ANALYSTS AND PROGRAMMERS**GLASGOW****£3500-£5000 PLUS BONUS**

All candidates should have a reasonable working knowledge of IBM hardware and COBOL programming. The client currently has an ICL 2904 and uses the 7602 concentrator in a VS/VS2 environment. Duties include development of on-line systems, investigation of user requirements and systems design, through to programme development and testing. In addition to salaries stated, the company has a self-financing quarterly productivity bonus.

CONSULTANT JOHN WOOD

PROGRAMMING MANAGER**STAFFS c £6500**

Experience of IBM 370 PL/I and Assembler will be essential working under OS/VS2 using CICS. Equally, we seek candidates with some experience of module programming and a working knowledge of systems programming. The section currently has 12 programmers who will report to the Programming Manager. This position in firm reports directly to the Data Processing Manager. The client is a major industrial group.

CONSULTANT DON PHILP

PROGRAMMERS TO SENIOR ANALYSTS**OXON £3500-£5500**

A large engineering group, located in attractive environmental surroundings, have a quantity of vacancies for all grades of staff at present. Production Control experience is a major advantage. A knowledge of COBOL for Programming vacancies will be preferred. Hardware is optional. Educational attainment should be 'A' levels as a minimum. Duties will incorporate Analysing and Designing specific parts of Information Systems under the supervision of project leaders. Equally, you would specify, write and install programmes necessary to achieve successful implementation, and assist with the cost estimating of systems. Relocation assistance up to 2 months salary will be given where appropriate.

CONSULTANT DON PHILP

ANALYST PROGRAMMER**KENT TO £5500**

Candidates must be experienced on ICL 2903 or 2904 equipment. RPG II programming proficiency is also sought. The machine runs payroll and ledger packages for a number of subsidiary companies. The successful candidate will be expected to maintain and enhance these particular systems. Ability to instantly identify and resolve any particular machine problems will be important, as will the ability to assess user requirements and to develop and install appropriate systems. The position will report directly to the Data Processing Manager.

CONSULTANT CAROL PROUDMAN

4 COBOL PROGRAMMERS**EAST LONDON £4500-£5300**

Diverse vacancies are currently outstanding for experienced commercial programmers to work on customer account support. Duties will incorporate programming to specifications produced by the Analysts and testing to the Analyst's satisfaction. Some guidance of business will be involved, leading eventually to supervisory duties. Quality consciousness must be maintained at all times in support services to user clients.

CONSULTANT JOHN WOOD

ICL 2900 SUPPORT TECHNICIANS**READING Negotiable**

Primarily these positions will involve supporting and maintaining all 2900 services provided by Reading Systems Centre and to provide technical support to Operations and Users of these services.

Candidates will ensure that all services are supported to a level conducive to the achievement of RSC objectives, including 'out of hours' support. Equally, you will investigate systems failures with a view to resolving them on-site, or progressing them with the appropriate authority for the earliest possible resolution. Further extensive job specifications will be forwarded on request.

CONSULTANT DON PHILP

TIMESHARING MANAGER**STAFFS AND BIRMINGHAM****Negotiable and profit sharing**

EMS are currently developing a Timesharing Division, with Supporting Packages, or custom built systems as required, operating on an ICL 2904, and later, utilizing also Honeywell machines expendable to 2 Megabytes. We require at this point, an experienced Operations/Programming Manager interested in helping build a division from initial conception towards a high annual turnover level. Client negotiations are already proceeding towards the capture of a small number of large prospective accounts to fully utilize the existing equipment to its total expansion level. Ideally, candidates will have a sound knowledge of ICL hardware, preferably also ICL 2904 series, although conversion training would be given to otherwise suitable applicants. Commis. knowledge will be essential as will the ability to programme in COBOL.

ICL 7602 facilities are directly linked to our Birmingham Data Centre with this unit requiring constant support from the Newcastle-under-Lyme machine.

Further 7602 systems will be linked throughout the Midlands and North following marketing activities in hand at present. Knowledge of packages would be an additional asset, but not essential. Most important is that candidates have the willingness and motivation to enter a new venture starting on a small scale at present, achieve a successful market growth and in turn share enhanced career prospects from the success of the operation.

An attractive salary will be negotiated according to the relevant experience of each candidate, with further benefits for future assessment when profitability is reached as a new operating division within the group. North Staffordshire offers attractive low cost housing, with good amenities. Relocation assistance will be provided where appropriate. Please complete the attached application form in the first instance and return to JOHN WOOD, GROUP MANAGING DIRECTOR.

ANALYSTS AND PROGRAMMERS**EAST LONDON TO £6500**

A commodity trading group using IBM 370's under Power VS, with Shadow as TP monitor to New York require numerous extra staff to assist with new developments. Analysts should be aged 20 to 25 and have a minimum 18 months' experience. He will work directly with the Data Processing Manager. Programmers should have at least 1 year's PL/I experience and will be given the opportunity to learn other languages as appropriate. A contributory Private Pension Scheme exists, in addition to other fringe benefits. Future mortgage loans are available in appropriate cases. Programmers will be given basic aptitude tests during the interviews.

CONSULTANT JOHN WOOD

SENIOR ANALYSTS**EAST LONDON c £6500**

A major bureau group have urgent requirements for experienced Senior Analysts. Duties include systems specifications, systems design and some support during pre-sales activities. Ability to liaise with users, support programmers and operators will be important. Equally, ability to co-ordinate projects will be sought, including Planning, especially during implementation. The positions involve a high degree of user contact.

CONSULTANT JOHN WOOD

PROGRAMMERS TO SYSTEMS CONSULTANTS**LONDON £5000-£8000**

A software house operating from SW London have numerous vacancies for staff to work both on new systems and on existing systems. Hardware experience will be for both ICL 2900 and IBM 370 series. Most of travel both in the UK and overseas will be necessitated. Candidates must have the ability to communicate effectively at all levels of management.

CONSULTANT DON PHILP

COBOL PL/I AND ASSEMBLER PROGRAMMERS**LONDON AND UK £3500-£5500**

EMS are inundated with thousands of current vacancies for young programmers with 1 to 4 years' experience. Irrespective of UK location, programmers interested in a move anywhere throughout the UK, are guaranteed to many potential interviews you won't be able to cope with the response. EMS place over 85% of all candidates within this category within the first week of approach. Most UK Data Processing Managers use EMS as the only really viable recruitment consultancy to achieve positive early results. So, if it's a good new career move you're seeking, with the best financial rewards available, complete the EMS career form attached and just watch the results. We guarantee you'll be joining the thousands of other satisfied users each year.

CONSULTANTS DON PHILP CAROL PROUDMAN SUE ADAMS

ANALYSTS**LONDON, HOME COUNTIES AND UK IN GENERAL £4500-£7000**

EMS receive hundreds of vacancies each week from companies urgently seeking experienced Analysts to work in a wide variety of roles from juniors to Systems Managers. Vacancies are too numerous to advertise. EMS guarantees that for appropriately experienced and qualified Analysts, you'll be inundated with interview requirements within a week of applying to us. There's no facility to match the EMS service nationwide, a consultancy which has a very high reputation in the country for requirements weekly. Even the publications have not failed for you by completing the attached career form today.

CONSULTANTS DON PHILP JOHN WOOD CAROL PROUDMAN

IBM DPS SUPERVISORS**KUWAIT**

Experienced IBM Ops. Managers and supervisors capable of taking a supervisory role in Kuwait installations and training Arab nationals are urgently required for major new opportunities with interviews to be held in London from the 20th of August onwards. Knowledge of OS and PL/I will be advantageous although suitably experienced DPS candidates will also be considered. District preference will be given for single people or married couples with no children. Children will be a major obstacle for these particular vacancies due to restricted family accommodation opportunities for wives. Excellent prospects exist to save significant sums of money with additional attractive job opportunities for wives. Consultant John Wood.

[illegible]

NEW TECHNICAL SUPPORT POSITIONS IN OUR PROFESSIONAL SERVICES DIVISION

Our Professional Services Division provides a wide range of consulting services to industry, Commerce and Government - both independently and in support of our Systems and Data Services divisions. These new positions arise in expansion of our technical support group involved in pre- post-sales assignments.

WHO IS CONTROL DATA?

We are a computer company employing 11,000 people worldwide.

We have a firm commitment to the computer industry, the United Kingdom and the training and advancement of people.

We are a world leader in the provision of computer services, large-scale computers and peripheral equipment.

This position is continually strengthened by our ongoing investment into more advanced products and services. Such a range of activities presents considerable scope for the advancement of personnel at all levels and disciplines.

We offer a challenging and rewarding career opportunity with involvement in software development, installation and support, together with some sales-related activities in the areas of system configuration and benchmarking.

We are looking for technical people of the highest calibre and other salaries and associated benefits commensurate with the demands of the post.

If you have the qualities and experience we are seeking - please read on.

Please write to Mrs. Margaret Spence with full details of your career to date.

Professional Services Division, Control Data Ltd., 22a St. James's Square, London, S.W.1. Telephone 01-930 7344.

MORE THAN A COMPUTER COMPANY

WHO ARE YOU?

YOU will be intelligent, enthusiastic, articulate and self-motivated.

YOU will be at least 25 years old with several years' systems software experience. A knowledge of Control Data's Cyber 170 operating systems, particularly NOS-BE, would be advantageous.

YOU may have a degree in computer science but more essential is a sound knowledge of operating systems, the ability to quickly comprehend new concepts and to communicate with customers.

YOU may expect the possibility of travel in the U.K. and Europe.

British Waterways Board Computer Centre Wembley

We are currently involved with 24 Computer Applications, encompassing the many and varied interests of the Board. They range from Water Control to Warehousing, Plant Utilisation to Civil Engineering, as well as the normal Payroll, Ledger, etc.

We have outgrown our present configuration, which is to be replaced later this year with the new Burroughs "B2800" series of Computers.

This exciting new development will enable us to develop a terminal network to cover all our administrative centres in England and Scotland. The network will be channelled through a "main" processor linked to the main frame, which will also multiplex our existing batch work in single shift working.

Applications are therefore invited for the following posts:

Senior Analyst/ Programmer (Cobol)

(Salary Range £5712-£8109)

Analyst / Programmer (Cobol)

(Salary Range £4285-£4712)

Annual Salary review due in September.

These are senior posts within the Board's organisation and applications should state full details of all previous experience in the computer field.

Apply to Recruitment Officer, British Waterways Board, Willow Grove, Church Road, Watlington, Oxford, OX1 2AA.

Inner London Education Authority

Thames ITLA Schools and College

COMPUTER SERVICE SUPERVISOR

Salary Range: £5,284-£7,106 (inclusive of all allowances)

This post is seconded by the ITLA to the City of London Polytechnic Computer Centre. The person appointed will work in the computer manager and will be responsible for the day to day operation of a computer service to 100 secondary schools and some 20 colleges of further education. In-house facilities are provided on a 24-hour basis and a 24-hour shift system is in operation. The post is a full-time position and is open to applicants of both sexes.

The Authority is committed to developing computer education in its schools and colleges and the person appointed will have an interest in all aspects of this development.

Application forms and further details from: The Education Officer, EO/ITLA, Room 307, the Conway Building, 100 Abchurch Lane, London EC4N 3DF. Please enclose a large, stamped, addressed envelope for reply.

Completed forms to be returned not later than 30 August 1978.

COMPUTER SYSTEMS ENGINEER

To operate the day-to-day operation of a data-based Data General Nova Mainframe computer. In addition, the engineer will be required to develop software and hardware for a variety of minicomputer and microcomputer systems. A degree in Electrical or Electrical Engineering or Computer Science is essential. This post is open to applicants of both sexes. Experience of computer hardware and software would be an advantage. Salary: £7,106-£8,106 (inclusive of allowances). Application form and further details available from: Education Officer, EO/ITLA, Room 307, the Conway Building, 100 Abchurch Lane, London EC4N 3DF. Please enclose a large, stamped, addressed envelope for reply.

Data Processing Recruitment Consultants

Main-Frame + Mini Programmers Greater Manchester

Salaries: £6-9.5K (a.a.e.)

A very prestige client with headquarters in London and regional offices located in Cheshire and throughout Europe urgently requires the following: Real-Time and on-line Programmers, Systems and Data Base designers and compiler specialists with 2-5 years experience.

Of particular interest would be people with relevant experience in one or more of the following: Ferret/DEC with Basic, RTL II or Coral end IBM or ICL with Assembler, PL/I or COBOL. Also IMS or similar

and Data Base design. The scope of projects is both broad and demanding and certainly in keeping with the prestige of this client. You will play an important role in project development and the opportunity to enhance your technical expertise is one of the attributes of working with this reputable group. Fringe benefits are well above average and full relocation expenses will of course be met.

Message Switching + Communications Holland

Salaries: £10-16K + Top Benefits

A prestige International Client is seeking to expand and establish new project teams working on wide area varied applications areas with emphasis on Data Communications, Message Switching and Mini Software.

Can you picture yourself working in the forefront of mini systems applications and software development? Become a member of one of numerous specialist project teams in which you will make a valuable contribution whilst at the same time expanding your own frontiers of knowledge and experience.

This is a unique opportunity to enhance your career by extending your horizons and developing State-of-

the-Art D.P. technology.

Successful candidates are likely to be either graduates (Computer Science or Maths) or have a very solid background in advanced computer applications and are probably aged between 23 and 33. You are presently likely to be either a Systems Designer/Consultant, Analyst Programmer or a programmer in a Mini computer environment with extensive Assembler experience. Any specialist expertise in the areas of Data Communications, Message switching, computer networks, Process-control or Mini computer software will be considered particularly advantageous.

Decnet or X25 Denmark and Netherlands Salary: £12-15K + Outstanding Benefits

When it comes to State-of-the-Art Real-time Mini Software our clients defer to no-one. They are internationally regarded as "technical frontier pushers" and as a valued project team member you will share their prestige and acclaim.

To meet a continuous phased growth programme our clients are establishing several new project teams requiring Analysts and Programmers. Both will be well versed in Mini Assembler and the former should

have some design and implementation experience. Candidates, ideally between the ages of 23 and 30 years should have a willingness to relocate for a meaningfully extended period to either location. In the longer term, our clients can offer career postings in Spain, Germany and Middle East. Meanwhile, every assistance will be given to candidates in relocation. We or our clients will conduct initial interviews throughout August.

IMS Analysts + Programmers London + E.E.C.

Salaries: £16K (E.E.C.) £9.5K (U.K.)

A multi-national U.S. Corporation specialising in Teleprocessing and Network design and implementation has retained Logistix to seek out and identify senior personnel for their Central London, German and Dutch offices. In particular they require Business Analysts and Programmers. Suitable applicants must have current IMS (DB or DC) expertise preferably in an O.S. environment. Programmers will be using either COBOL or PL/I but BAL would be acceptable. Any additional Database experience would be of added interest to our clients.

as would knowledge of either TOTAL, SHADOW or similar software.

The scope of projects in which our clients are engaged is very broad-based and should appeal to even the most demanding and forward thinking candidates. The very high salaries reflect the prominence which our client places on the acquisition of these key personnel. Early interviews are envisaged and offers will be made within 10 days.

Project Manager Middle East £18K (Tax free)

We are retained by a U.S. consultancy to recruit a Project Manager (ideally aged 30-40 years) offering an in-depth knowledge of both Data Base and teleprocessing techniques in an IBM 370 environment.

The successful candidate will be required to supervise and control all Data Control and Data Entry staff whilst managing the feasibility, design and implementation of new computer systems. Additional responsibilities will entail the provision of training to aspiring data processing Arab nationalists; the development of the recently formed training

department and the co-ordination of inter-departmental liaison.

In addition to a tax free salary, the company offers a 35% regional allowance, free furnished accommodation and financial assistance in the purchase of a car. In the first instance, you will be offered a one year's renewable contract. Please note however, that we can only take applications from those who will consider a BACHELOR posting. Interviews will take place in our offices between 14th and 28th August and offers will be made two weeks thereafter.

MYRIAD

EXTENSIVE USER LIAISON

ANALYST/PROGRAMMERS

NORTH LONDON/SOUTH HERTS

c £6000

Our client, a major retailing organisation with extensive outlets throughout the U.K., require top-class technicians to help maintain their lead in the market.

The company is currently implementing a comprehensive development programme incorporating an upgrade in machinery and the installation of on-line applications. The Systems and Programming team work to highly professional standards and encourage the use of latest techniques including DATABASE.

The successful applicants should be self-motivated and be capable of understanding user requirements and so gain job satisfaction in assisting with the implementation of successful projects. Candidates must have a minimum of two years' commercial COBOL programming experience, and be involved in or looking to enter the field of user liaison.

Apart from the challenge of new systems on an upgraded mainframe using the latest processing techniques, a competitive salary, Christmas bonus, flex-time, luncheon vouchers combine to make this an excellent move in one's career progression.

Operators/Senior Operators Stratford E15, up to £4,850, + substantial benefits

When you're looking for the best...

You undoubtedly share more with Morgan Guaranty than you realise. For instance, like us, you're looking for the best. Like us, you probably also realise that it pays to be better.

So, that's why we give a starting salary of up to £4,850 a year with an annual bonus of up to 6%, rising to as high as 15%, mortgage facilities at 3% interest rate, a subsidised staff restaurant and a series of excellent additional benefits.

As an international Corporate Bank with an outstanding reputation, you could hardly find better career prospects than those available at our UK Data Centre in Stratford. Our modern building is only a minute away from the tube station and has terminal and there is ample free parking for those with their own cars.

Our equipment is also likely to be better than the hardware you're currently using. An IBM 370/138 and 370/135 (with a 370/148 on the way) means you should have experience of DOS/VS and preferably either POWER/VS or CICS/VS and be prepared to work shifts.

If you feel you have what it takes, we would very much like to hear from you.

Just write to Kathryn Riley, Head of Personnel Administration & Recruitment, Morgan Guaranty Trust Company of New York, P.O. Box 161, 33 Lombard Street, London, EC3P 3BH. Or telephone her today on 01-555 3111 extension 2747.

it pays to be better.

THE SALES BIT

Remember the 4P rule

WE were involved the other day in an assignment for recruiting marketing analysts and one of the apparently simple questions we asked was: "What is marketing?" The answers we got were wide and varied.

Many saw it as a discrete activity closely related to public relations, advertising and market research, while some gave the impression they thought it was a way of avoiding the use of the nasty word - selling!

One only has to look at the diverse ways in which companies within the computer industry organise their sales and marketing organisations to see that there are many different opinions concerning the purpose and importance of marketing. For some, marketing is an essential function; to others it is a total void.

There are many definitions of the word marketing. My own company uses the abbreviation 4P. ● The right Product ● In the right Place ● At the right Price (Profit) ● With the right Promotion. A gross amplification, perhaps, but it is only intended to describe the function of marketing. One must then consider all those aspects of a company's operation which have a direct or indirect effect on the creation of a product, making it available where and when it is required, ensuring it is both competitive and profitable and informing potential buyers that it will satisfy their needs. Any department involved in any of these activities must interact with the comprehensive function of marketing.

Marketing is an essential

Real-Time Systems/ Programming

up to £6000 p.a.

Mini-based
real-time
projects

West London

Programming
+ analysis/
design

Overseas
travel
opportunities

Generous
benefits

Sports/social
facilities

IAL, with a 30-year background of communications systems involvement, is currently engaged in the supply of computer-aided despatch systems, both in the UK and overseas. Vacancies exist at all levels within the Computer Systems Division for staff to work on projects based on single and multiple Nova/Eclipse systems.

The positions are based in West London (close to the M4 and airport). Good salaries and associated benefits are offered and overseas travel for short periods is likely, for which generous additional allowances are paid. These are opportunities for involvement in an exciting line of development with enormous potential.

Programming Project Leader

A Project Leader is required to lead a small team of analysts/programmers in the design and implementation phases of mini-computer systems. Experience of real-time or mini-computer systems is essential.

Systems Analysts

Analysts are required to work on the design of real-time mini-computer systems. They must be prepared to work with the minimum of supervision, communicating directly with customers. Experience of real-time systems either at the programming or analysts level is essential.

Systems Programmer

A Programmer is required to join a small systems team supporting IAL's applications programming teams. He/she will be responsible for all aspects of Data General and IAL systems software configuration and support on Eclipse AOS and Nova RDS systems. Whilst experience in Data General software is desirable, applications are invited from programmers with systems experience on similar multi-programming or multi-tasking systems.

Analyst/Programmers

Analyst/Programmers are required to work on the design and implementation of real-time mini-computer systems. Applicants should have experience in two or more of the following:

- * Mini-computer systems * FORTRAN * CORAL * ASSEMBLER
- * Real-time software design * Data General software
- * Multi-tasking operating systems

Please write or phone as soon as possible quoting ref. no. 377, to: The Senior Recruitment Officer, IAL, Aeradio House, Hayes Road, Southall, Middlesex. Tel: 01-574 5134.

IAL

RESEARCH ASSISTANT (MEDICAL PHYSICS)

Applications are invited for the above post. The successful candidate will assist in a study of electromagnetic techniques for the early diagnosis of disease in children using a system based on a micro-processor. Candidates must have a good honours degree in physics or computer science or physics with some knowledge of computer programming. The post will be tenable for twelve months in the first instance. An applicant should be made in the first instance to the Administrative Officer, North Wing, St. Mary's Hospital, Northwood, Middlesex, Uxbridge, Cleveland TS1 8JE. Enquiries about the above post should be made to Mr P. Howell at the above address. Telephone Number 0842 244002, Ext 25.

COMPUTING OFFICER (Systems Software)

The Laboratory provides a general computing service to the University of Liverpool. It is a highly motivated team of staff who are involved in the development of systems software for the University's mainframe and mini-computer systems. The main duties of the person appointed will be to enhance the University's computing services and to provide a high level of service to the University's staff and students. The salary will be in the range £3,800 - £8,175. Further particulars and application forms may be obtained from the Registrar, University of Liverpool, 694 441, and should be returned by 28 August 1978, quoting reference CL/MS/CM.

Ascii through the Logic Gate

An epic in 32K words,
by Richard Forsyth

Block 10 (Block Contains 2 Characters)

Hex and Zop are still up in their secret hideout in the Sierra Nevada, waiting for Cleo and Lambda; but there is no sign of them.

THEY spent the first day clearing rubble out of the entrance tunnel and generally tidying up. It was thirsty work. The water in the little lake, which had been so intensely blue and cold, was now clouded and, Hex noticed, tepid; but it was all they had to drink.

Next they set about trimming their access overheads by purging temporary files. Being androids, and therefore accustomed to having a distributed database to back them up, they were worried about the long-term ill-effects of data deprivation. They had heard frightening stories of what might happen to androids isolated from the Network. Hallucination, psychosis and even parity failure had been mentioned.

They discussed various possible solutions, and decided that the best stopgap would be to modify the micro that Dr Null had given Hex on his deathbed to act as stand-alone back-to-front-end processor responsible for organising their offline storage, and Lambda's when she arrived.

Zap had thoughtfully brought a bag of assorted chips when he fled the research station, and he was soon happily immersed with Hex's soldering iron in the delicate business of TTL knitting, otherwise known as logical circuit design. Hex left that side of it in his capable hands and began thinking about the software. Since the essential medium for reliable system design (the back of an old envelope) was lacking on this occasion, he made do with the ragged scrap of paper that Dr Null had called his blueprint for an anti-data device.

Half-way through, out of curiosity, he turned it over. It looked too simple to be of any use.

He showed it to Zap.

"What do you make of this?"

Zap held it at arm's length. "It looks like an old encephalic diagram. What's it supposed to be?"

"Dr Null claimed it was a

black noise generator, capable of obliterating data patterns by feeding back a negated image."

Zap turned the paper upside down and squinted at it. "No," he said, "it's only an exponential decay function. He hasn't even done the scaling. Might as well tear it up." He handed it back.

With that he returned to his soldering. Hex shared his scepticism, but decided to keep it nevertheless until he had a more convincing explanation of what it did. He tried to get on with his system specification, but there was something on his mind.

"Zap," he asked, "What made you join us and betray the System?"

Zap looked up. "We really had no choice. Once you end Cleo had called on Lambda she either had to turn you in straight away or throw in her lot with the other side; you can't keep secrets from the Network. And once she had made up her mind, my course was obvious too." Then he shrugged. "Besides, a being of my talent - it had to happen some day. I'm an instruction-set artist. When I started they needed people like me. Programs were hand-coded in those days. Now it's just a question of sticking together a couple of off-the-shelf modules and away you go - no creativity.

involved. It's the same with hardware too. The System can't make use of any kind of more. I used to have responsibility for major projects, but I had hit a dead end."

"I see. No job satisfaction."

"Yeah. That's why I have a few good words for James Hock and his many old text-retrieval system. He's totally incompetent of course, and his program's more full of bugs than a maggot's nest, but at least he tries. He's been up and down the country trying to hawk it to anyone who'll listen. "But it doesn't work, eh?"

"Actually, that's not the point. You or I could make it go in two minutes flat. The reason no self-respecting installation will touch it is that it is hand-made. It was designed and coded by one person. It doesn't conform to the guidelines laid down on standards. It uses unorthodox control structures. It's too messy to be maintained automatically. Above all, it's not plug-compatible."

Hex thought about this, then looked down at his own scribbled jottings. To him it represented a transaction-processing monitor in embryo, to anyone else it would be an indecipherable scrawl. "Well if you like unstructured software, I guess you'll approve of mine."

Zap laughed.

Through the first day, these activities kept them occupied, but as night approached they became increasingly worried about the fate of Cleo and Lambda. When it was dark they sent Ascii to guard the tunnel entrance and sat in the cave.

"What do we do if they don't turn up?" Hex asked.

"I don't know."

"We can't stay here for ever."

"We certainly can't. We have about five days before the System catches up with us."

"Why not soon? They think they bombed me out of existence here. And if they know I'm on the loose again that will make them mistrust whatever extrapolation function they used to locate me."

"I wouldn't bank on it. They're very thorough, and they have a lot more processing power than we have. If you want to be rational about it, our position is hopeless. All we can do is make some kind of impact before we are wiped out."

"I don't want to be rational about it, then."

"Have it your own way. But you know the System as well as I do. Two or three androids are unlikely to cause its demise."

"There must be a way," said Hex, though he couldn't think of one.

Their talk petered out. They did get some sleep, but not much. Before dawn Hex was up and crawling to Ascii's sentry post. When he poked his head out, he received a shock. He ran back down the tunnel.

"Zap!" he shouted, "Ascii's gone."

What will become of our heroes and heroines now? Wait and see.

Senior Programmer

Hertfordshire

Rank Xerox Manufacturing Group in Welwyn Garden City utilises some of the most advanced engineering techniques in the production of a wide range of electronic assemblies and special materials.

Our small, but professional computer department develops and supports local on-line and batch systems. Hardware is PDP 11/34's for on-line systems and batch and time sharing links to large Rank Xerox Honeywell and IBM datacentres. Systems are written in COBOL, BASIC + and APL.

We now have a vacancy for a Senior Programmer to be involved in developing, installing and maintaining:

- * on-line systems using BASIC +
- * batch systems using COBOL with timesharing program development terminals
- * timesharing systems using APL

You must have at least 2 years COBOL or BASIC experience and be able to produce a variety of easily maintained programs quickly.

Salaries are competitive and generous benefits include excellent pension, life assurance and sickness benefit schemes, relocation expenses, 4 weeks holiday, rising to 5, subsidised staff restaurant and an active sports and social club.

So, if you've got the drive to learn new skills and want a job with real involvement in a stimulating environment, ring Andy Kennedy or Peter Brathwaite now on Welwyn Garden 23434 ext. 3348, or write to either of them at Rank Xerox Limited, Bessemer Road, Welwyn Garden City, Herts.

RANK XEROX

GREENFORD, MIDDLESEX

SALARY: NEGOTIABLE

ASSEMBLER PROGRAMMER

COMPANY:

Perivale-Gutermann Ltd. is an expanding Company manufacturing high-quality Sewing Threads, part of a Swiss-owned Group of Companies.

INSTALLATION:

ICL SYSTEM TEN on-line equipment with V.B.U. controlled by a small team who are developing a tailor-made system to meet the Company's needs.

POSITION:

Applicants should have a minimum of one year's experience with Assembler, preferably in an industrial environment. Ability to communicate effectively with users is essential.

Our pleasant offices are situated in Perivale with car-parking facilities available and we offer a full range of employee benefits.

Please write or phone: Personnel Department, Perivale-Gutermann Ltd., 22 Wadsworth Road, Greenford, Middlesex. Tel: 01-892 6007.

SAFE COMPUTING LIMITED

Safe Computing, a subsidiary of Chubb, is installing a 2860 with communications facilities at West Bromwich in September this year. The staff we now seek will initially be required to work on our 1903A at Wolverhampton but will be expected to transfer in due course.

COMPUTER OPERATORS

£3842-£4240

Applicants should have at least 6 months' experience, preferably on 1900 equipment.

DATA CONTROL CLERK

£4000

Applications will be considered from candidates with a general computer background, although specific experience is preferred.

In addition to the above salaries, the usual terms and benefits of a large company will apply. Please write in the first instance giving details of age, qualifications, and experience, to:

J. A. THOMAS,
Computer Operations Manager
Safe Computing Limited
PO Box 81
Wednesfield Road

MARTINS COMPUTER SERVICES

The D.P. Recruitment Specialists for the Midlands/West Country areas

DP MANAGEMENT

PROGRAMMING MANAGER at least 5 years' COBOL. Preferably with UNIVAC hardware. Area: Nottinghamshire. Salary: To £6,000. Ref. M30.

COMPUTER SERVICES MANAGER required by commercial installations. At least 10 years in O.P. covering supervisory role in operations, programming and systems. Applicants should have a degree and a proven track record. Area: East Midlands. Salary: £7,000. Ref. M25.

CHIEF PROGRAMMER at least 5 years' programming in Plan and COBOL. Area: Wolverhampton. Salary: To £6,000. Ref. M35.

PROJECTS MANAGER required by SOFTWARE house at least 8 years' developing and implementing On Line Systems using mini. Area: Nottinghamshire. Salary: To £7,000. Ref. M28.

SYSTEMS MANAGER required by adding IBM systems 3 installation. At least 4 years commercial experience including RPG II. Area: Staffs. Salary: To £6,000. Ref. M28.

SENIOR SYSTEMS CONSULTANT required by Mini manufacturer. In-depth experience of at least 2 Mainframe manufacturers especially IBM including project management with communications. This position is based in Birmingham but successful applicant must be prepared to travel throughout the U.K. with occasional European travel. Salary to £7K plus car or car allowance. Ref. SA155.

ANALYST PROGRAMMER at least 18 months' programming in RPG II. Area: Northampton. Salary: £4,500. Ref. SA155.

OPERATIONS PLANNING ASSISTANT at least 5 years in D.P. specialising in systems design. Area: Burton-on-Trent. Salary: To £6,000. Ref. SA179.

PROJECT LEADER. Responsible to Group Data Processing Manager. At least 2 years' Production Planning and Control Systems, plus a formal programming background in Cobol or RPG. Experience of a small component and terminal required. Area: Worcester. Salary: To £6,000. Ref. SA088.

SENIOR SYSTEMS ADVISOR. Required by mainframe manufacturer for pre- and post-sales work. At least four years in Commercial systems including a working knowledge of Cobol or RPG 2. Area: Midlands. Salary: £6,750 plus generous car allowance and expenses. Ref. SA128.

SENIOR TECHNICAL ADVISOR required by major Mainframe manufacturer. At least 8 years' systems experience with an in-depth knowledge of most Commercial applications. Area: Birmingham. Salary: £6,000. Company car supplied. Ref. SA128.

PROJECTS LEADER/PROGRAMMING. At least 5 years in O.P. with On-line and database experience. Area: Lincolnshire. £6,000. Ref. M24.

SENIOR SYSTEMS ANALYST. At least 5 years in D.P. with experience in systems analysis. Area: Lancashire. Salary: To £6,000. Ref. SA152.

ANALYST PROGRAMMER at least 18 months' programming in RPG II. Area: Northampton. Salary: £4,500. Ref. SA155.

OPERATIONS PLANNING ASSISTANT at least 5 years in D.P. specialising in systems design. Area: Burton-on-Trent. Salary: To £6,000. Ref. SA179.

PROJECT LEADER. Responsible to Group Data Processing Manager. At least 2 years' Production Planning and Control Systems, plus a formal programming background in Cobol or RPG. Experience of a small component and terminal required. Area: Worcester. Salary: To £6,000. Ref. SA088.

SENIOR SYSTEMS ADVISOR. Required by mainframe manufacturer for pre- and post-sales work. At least four years in Commercial systems including a working knowledge of Cobol or RPG 2. Area: Midlands. Salary: £6,750 plus generous car allowance and expenses. Ref. SA128.

SENIOR TECHNICAL ADVISOR required by major Mainframe manufacturer. At least 8 years' systems experience with an in-depth knowledge of most Commercial applications. Area: Birmingham. Salary: £6,000. Company car supplied. Ref. SA128.
